

Business Complexes and Synchronized Time Systems

No matter what product or service an organization provides, many departments have deadlines that need to be met on a regular basis, projects that must be completed, deliveries that have to go out by a certain date and sales reports that management needs to review. By implementing a Sapling synchronized clock system, organizations stay on top of every deadline, monitor employee attendance and provide peace of mind that everyone is operating on the same time. A synchronized clock system has the ability to reliably provide the exact time to all clocks, regardless of the type of building construction.

A synchronized clock system offers many benefits that will help companies, including:

Assist Employees in Managing Their Day – When an organization decides to install a synchronized clock system, all departments will be operating on the same time. With accurate time displaying in every office, conference room, break room etc., employees will have a necessary tool in order to help them plan out their day. Your employees will know exactly how much time they have to wrap up a project, schedule a meeting with clients or coworkers and even schedule additional time for unexpected interruptions.

Coordinate Systems Within Your Office – Within your facility, you may have multiple systems that help your employees conduct business throughout the day. When you install a synchronized time system in your facility, you have the ability to coordinate your time & attendance management system, Voice over IP phone system and even your PA system. Along with providing the exact same time throughout your facility, a Sapling Synchronized Clock System can synchronize many systems throughout your building.

Global Time Awareness – Today, companies can conduct business and collaborate with corporations and customers all around the globe. Along with providing reliable time keeping systems, Sapling also offers a zone clock, which displays the time in your current location as well as the time in other regions or countries around the world. The Sapling Time Zone Clock lets your employees know when an international company's workday begins and ends, and assists in scheduling conference calls and meetings with international clients. Besides showing the time internationally, the zone clock can also display the time in your company's satellite offices located in different parts of the country or world. The zone clock also automatically updates all clocks for Daylight Saving Time all over the world (if observed), saving your organization maintenance fees.

By providing accurate time throughout a facility, a synchronized clock system can help employees schedule and manage their time, assist in monitoring employee attendance and help conduct business with companies around the world. Sapling offers high quality and reliable synchronized time keeping systems to meet your organization's unique needs.
