

Clear Protective Clock Covers

Sapling offers the perfect solution for protecting your clocks installed in harsher conditions. Our clear clock covers will fit easily over any of Sapling's analog or digital clocks, shielding them against moisture, dust, and debris. The clear polycarbonate covers provide uncompromised visibility and feature a mountable dome construction with pre-drilled holes making installation effortless.

Sapling's shatterproof clear clock covers are recommended for extra protection when installing the clocks in unforgiving environments such as, indoor swimming pools, manufacturing facilities and carpentry workshops, healthcare facilities, or any place where foreign objects or substances might affect the functionality of the clock.

We offer the clear polycarbonate protective cover in four different sizes to best fit your clock:

- Clear Cover for 9" Square & 12" Round Analog Clock Part Number: **SAG-CLR-COVR-12**
- Clear Cover for 12" Square & 16" Round Analog Clock Part Number: **SAG-CLR-COVR-16**
- Clear Cover for 2.5" Digital Clock Part Number: **SDG-CLR-COVR-25**
- Clear Cover for 4.0" Digital Clock Part Number: **SDG-CLR-COVR-40**

Cover for 12" Round Analog Clock

Cover for 2.5" Digital Clock

For applications requiring further defense against constant moisture or fine dust, Sapling recommends also using a silicone sealant between the cover and the wall. In extremely high humidity installations, Sapling can also offer additional internal protection from moisture by applying a conformal coating to the electronic board inside your clock.

This additional option can be ordered using:

Conformal Coating for PCB Part Number: **A-CONF-COATING-1**
