

Custom Dial Face Options

Sapling offers many clock options in order to accommodate customers' various preferences. Sapling's digital clocks are offered in different sizes, different housings and 4 different display colors: Red, Green, White and Amber. Our analog clocks also have numerous options to choose from including a round or square shape, different sizes and cases. And the ability to customize with our specialty hands and dials or a dial with your own logo!

If you want to take your customization even further, Sapling can also offer custom dial faces. This means the customer can choose a unique background for their clock dial. In order to explore this option and be able to print quality dials, we need to receive one of two things; you can either supply Sapling with picture of an idea that you would like to see come to life, or, a high-resolution digital file of the background in one of the following formats:

- an EPS file format (vector line)
- an AI file format (Adobe Illustrator)

After receiving the files, Sapling will review the request & see if we can accommodate the request.

We at Sapling pride ourselves on our high quality standards and as such we require a high resolution copy of the logo or design in an EPS or AI file format (in CMYK), as these programs are designed and formatted for professional printing. Other high resolution digital file formats (such as JPEG or PNG) might be acceptable for printing the dials, however if they are not formatted for professional printing, slight color variations in the logo or dial may occur. We print our dials directly from the file provided to us and, unless told otherwise, colors will print as formatted in the files provided.

Before we print the dials, Sapling provides a digital proof in PDF format to the customer for approval. This proof is for the custom dial positioning and proportions. However, the colors presented on the computer monitor (when viewing the proof) may not reflect the actual color printed on the dial because color tones vary from one computer monitor to another. If there are questions or concerns about exact color matches, please consult with your Sapling sales representative.

Having a dial with a custom face is a great way to showcase your school, hospital or company, and create brand recognition. Sapling can take an ordinary looking clock and make it extraordinary. Please check out all of the options and design styles offered by Sapling before placing your next order for a synchronized clock system.
