

Custom Logo Options

Sapling recognizes that our customers have varying demands and needs depending on the application. For this reason, we are pleased to offer many clock options to choose from in order to accommodate customers' preferences. Sapling's digital clocks can satisfy many applications with different size options, different housings and 4 different display colors: Red, Green, White and Amber. Our analog clocks are offered in round or square shape, different sizes and cases. You can purchase our clocks with standard hands and dials or we offer optional specialty dials and hand styles.

If you want to take your customization even further, Sapling can also print dials with the customer's logo. We at Sapling pride ourselves on our high quality standards and in order to be able to print quality dials with the custom logo, we need to receive a high resolution digital file of the logo from the customer in one of the following formats:

- an EPS file format (vector line)
- an AI file format (Adobe Illustrator)

Sapling requires a high resolution copy of the logo in an EPS or AI file format (in CMYK), as these programs are designed and formatted for professional printing. Other high resolution digital file formats (such as JPEG or PNG) might be acceptable for printing the dials, however if they are not formatted for professional printing, slight color variations in the logo can occur. We print our dials directly from the file provided to us and, unless told otherwise, colors will print as formatted in the logo file provided.

Before we print the dials, Sapling provides a digital proof in a PDF format to the customer for approval. This proof is for the custom logo positioning and proportions. However, the colors presented on the computer monitor (when viewing the proof) may not reflect the actual color printed on the dial because color tones vary from one computer monitor to another. If there are questions or concerns about exact color matches, please consult with your Sapling Sales Representative.

Having a dial with a custom logo is a great way to showcase your school, hospital or company, and create brand recognition. Sapling can take an ordinary looking clock and make it extraordinary. Please check out all of the options and design styles offered by Sapling before placing your next order for a synchronized clock system.
