

Sapling Flush Mount Digital Clocks

Sapling offers digital clocks at various sizes with either four or six digits and provides four types of digital clock mounting options. These options include surface (wall), dual-faced (double mount), flag, and flush mount, which is designed to place a clock inside the wall, so only the display will be visible. These mounting options fulfill the functional and practical needs of any facility, while maintaining a stylish appearance.

Advantages

Sapling's flush mount digital clocks have several advantages, such as:

- Flush mount digital clocks are less susceptible to external damage
- Costs could be saved by retrofitting flush mount clocks into an old system
- Flush mount is easy to install, maintain, preserve and clean
- Flush mount digital clocks provide an additional mounting style option to accommodate different preferences

Compatible Systems

Sapling's flush mount digital clocks are available with our IP and Wired systems, including the 2-Wire Digital Communication, RS485 and Sync Wire systems. Flush mount housing is not an available option with our Wireless and TalkBack Wireless systems, as the metal housing may prevent the time signal from being received or retransmitted.

Digital Clock Options

The flush mount option can be used with all three Sapling digital clock models: 3100, 3200, and 3300.

Display Options:

- Digit Size: 2.5" or 4.0" digit size with a four (00:00) or six (00:00:00) digit display
- LED Display Color: Red (standard), Green, White, or Amber (at additional cost)

The flush mount option provides a sophisticated look, as well as an efficient solution for many scenarios. There are fewer opportunities for damage, and cleaning the clock becomes more manageable, as the clock's display lays flat with the surrounding wall. Sapling flush mount digital clocks are available in all three of our digital clock models to provide an elegant option for many applications.
