VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

The Clock and all network equipment must be powered and configured before you install the clock. If the network equipment is not properly installed and powered, and if the clocks have not been configured to communicate with the network equipment, the clocks will not synchronize.

Important Safety Instructions

\land DANGER

SHOCK HAZARD

• Keep the electricity to this device turned OFF until the clock installation is complete.

• Do not expose the clock movement to water, or install the clock in a location where it may be exposed to water.

NOTICE

- Do not install the clock outdoors. Damage to the clock if placed outdoors voids the warranty.
- Do not hang objects from the clock or clock mounting parts. The clocks are not designed to support the weight of other objects.

• The clock face and housing may be cleaned with a damp cloth or disinfectant. Test other cleaning products on a small part of the clock housing before attempting to use on the rest of the clock. Avoid bleach and chemicals known to dissolve plastics.

/k

FIRE HAZARD

- Always follow your national and regional electrical codes or ordinances.
- The AC power circuit for the clock must be attached to a circuit breaker that can be reset by the user.

PHYSICAL INJURY HAZARD

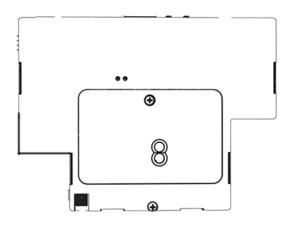

- If you are standing on an object while installing your clock, make sure that the object can support your weight, and will not sway or move as you stand on it.
- Take precautions to avoid injury by potential safety hazards near the point of installation including (but not limited to) heavy machinery, sharp objects, hot surfaces, or exposed cables carrying an electric current.
- Follow all mounting instructions exactly as stated in this manual. Failure to do so may result in the device falling off the point of installation.
- Packaging materials and mounting items include plastic bags and small pieces, which pose a suffocation hazard to young children.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Identify Your Clock

A label containing the part number of your clock is attached to the clock movement.

If your part number begins with SAW-4, you own a SlimLine ABS or SQUARE clock If your part number begins with SAW-5, you own an ALUMINUM clock If your part number begins with SAW-6, you own a WOOD clock

Example part numbers:

SAW-4BS-12S-4	(SQUARE clock)
SAW-4BS-12R-4	(SlimLine ABS clock)
SAW- 5A S-09R-1	(ALUMINUM clock)
SAW-6DS-12R-2	(WOOD clock)

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Preparing to Install - System/Network Requirements

To be able to set up an IP-based synchronized clock network, you will need the following items:

- This manual
- A Wireless Local Area Network (WLAN) that has access to at least one of the following:
 - An in-house NTP server
 - The Internet
- A local firewall that is open on Ports 80 (TCP), 123 (UDP), and 1777 (UDP)
- At least one laptop or desktop computer with access to the following:
 - The same LAN as the clocks
 - The same subnet as the clocks
 - A web browser such as Internet Explorer, Microsoft Edge, or Mozilla Firefox.
 - An internal or external Wi-Fi network card.

• A wireless router or wireless access point for the LAN that operates on the subnet 192.168.0.##, and broadcasts using an 802.11 b/g/n protocol.

- Depending on the size of the network, you may need to install additional Wireless Access Points.
- A copy of the Network Monitor program.
- Security access to all of the above items.

• A means of keeping a record of the clock serial numbers, locations, and IP addresses. Create a table like the one shown below:

SERIAL #	LOCATION	IP ADDRESS

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Synchronization System Setup

Positioning the Wireless Router or Wireless Access Point (WAP):

The main router or WAP should be installed in a central location. Depending on the transmission protocol of your router, the clocks must be located within the following ranges:

Wi-Fi Protocol	Range (Feet)	Range (Meters)
802.11 b	115 feet	35 meters
802.11 g	125 feet	38 meters
802.11 n	230 feet	70 meters.

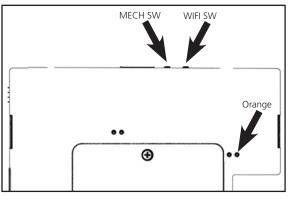

Check with the access point or router manufacturer, as some transmitters offer boosted ranges.

*NOTE: This clock is not compatible with 802.11a or 802.11ac protocols. Many AC-compatible routers and access points are backwards compatible with 802.11n. Check your router settings for more information.

Be aware of walls or other obstructions made of thick concrete or sheet metal, as these may block the signal entirely.

Logging into the clock for the first time:

1. Power the clock. Press and release the right-side "WIFI SW" on the movement twice. The Orange LED will light up. On a Wi-Fi enabled computer, check the available Wireless Networks. Refresh the available networks until a network named Analog-#### appears (where #### is the serial number of the clock). This may take up to 30 seconds. Once it appears, connect to this network.

2. Open a web browser and enter the following web address into the URL field:

http://192.168.240.1/login.html

3. On the login page, use the password **6063** and click on **Submit** to log into the clock.

SAPLING WIFI CONFIG			
Password(Show):			
Submit			

4. Click on the **Network Settings** button.

Synchronization System Setup (ctd.)

5. In the **Network** field, enter the SSID of your preferred Wi-Fi network. This is the name that appears if you try to connect to that Wi-Fi network on any other computer, tablet, or smart phone. If you do not remember the name of your network, check to see if it has appeared in the **Select Network** list. A network that does not broadcast its SSID will not appear in this list. **SSIDs must use only English letters, numbers, and spaces. No** symbols.

6. In the **Network Password** field, enter the password of your preferred Wi-Fi network. Network passwords must be 32 characters or fewer, and are casesensitive.

7. If you wish to set a static IP address, change DHCP Auto On from ON to OFF, then enter information for the Static IP address, Subnet Mask, and Gateway Address. To acquire this information, contact your network administrator.

8. If you wish to set a DNS server other than the one provided through DHCP,

erver other 9 Enterprise Settings Submit 10 gh DHCP,

change DHCP Auto On from ON to OFF, change Auto DNS from ON to OFF, then enter an IP address for a new DNS server in the DNS Address field.

9.If your network does not use Enterprise Encryption, skip this step.	WPA ENTERPRISE SETTINGS	
If your network uses WPA2-Enterpirse Encryption, click on the Enterprise Settings button and fill in the fields appropriate to your network. To acquire this information, contact your network administrator. When finished, press Submit to return to this page.	User Name: Outer Authentication: EAP-PEAP Inner Authentication: EAP-MSCHAP Submit	

10. Press the **Submit** button, followed by the **Log Out** button.

11. The clock should connect to the new Wi-Fi network. Confirm by accessing the clock with the Network Monitor (If clock DHCP is on and the computer is on the same subnet as the Access Point) or the new static IP address (if clock DHCP is off). If the clock is not accessible, press the WiFi SW button once and wait thirty seconds before trying to access the clock with the Network Monitor or IP address. If the clock is still not accessible, refer to the section of this manual labeled "Troubleshooting"

For NEW battery powered clocks: For the first four minutes after powering on, a new (or recently reset-to-default) clock will be accessible in direct mode. Once the user has entered and saved new network settings, the clock will only connect to the network once to make initial contact, then it will not access the network again until the next synchronization period twelve hours later. To force the clock to power its transmitter, the user must press the WiFi SW button.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Configuring multiple clocks with wifiDirectLoader

wifiDirectLoader.exe is a piece of software that lets a user rapidly duplicate existing clock settings to other clocks of the same type (analog or digital). This is useful for large clock systems, where a user may not have the time to configure many clocks individually.

NOTICE: Starting wifiDirectLoader.exe will take your computer off of its current Wi-Fi network. If you need to access your network while simultaneously running this software, connect the computer to the network using a LAN cable.

Obtaining the configuration file:

1) **DO NOT Start wifiDirectLoader.exe.** First, set up one clock using the steps described in the Synchronization Setup section of this manual.

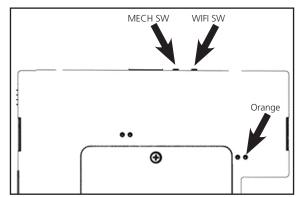

2) Once you have completed all of the steps, exit the clock.

3) Start wifiDirectLoader.exe by double-clicking on it. Enter the value **6063** in the password field.

Databases	Options	Version
Password:	****	[

4) Power the clock. Press and release the right-side "WIFI SW" on the movement twice. The Orange LED will light up.

Clock Co	onfigurations	as,			23

		<u> </u>			
Select Co	onfiguration F	ile			
Download	to Selected C	lock			
Upload fro	m Selected C	lock			

5) In the wifiDirectLoader.exe window, an entry should appear for the clock.

6) Click on the entry name for the clock, then press on the Upload from Selected Clock button.

		23
Analog-165		
	Analog-165	

7) Save the configuration file to an easily-accessible location, like your My Documents or Desktop folder.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Configuring multiple clocks with wifiDirectLoader

Before Applying the configuration file:

The fastest way to perform this process is to collect all of the Wi-Fi clocks in a single room and run this program.

If you have already installed the Wi-Fi clocks on the wall, you will need to take each clock down to access the Direct Mode button. Since Wi-Fi has a limited broadcast range, you will need to take a mobile, Wi-Fi-capable computer such as a laptop or ultrabook that runs wifiDirectLoader while you go to each clock.

Applying the configuration file:

1) Press on the Select Configuration file button. Use the window to select the configuration file that you downloaded from the first clock. If you cannot see the file, confirm that the Types of File field is set to Analog WiFi (*.awifi).

O Clock Configurations				
Databases	Options Version			
Password:	 Analog/Digital Filter 			
	Auto Run			

	O Clock C	onfigurations		
	Databases	Options Ver	rsion	
	Password:	****	Analog-165	
se				
bu	Select C	onfiguration File		
ne	Download	to Selected Clo	ck	
bg	Upload fro	om Selected Clo	ck	
	Computer		1	
	Network	File name:	-	Open
H	\rightarrow	Files of type:	Analog Wifi (*.awifi)	Cancel

2a) Under the Options menu, select Auto Run.

2b) You may also download to specific clocks by clicking on the name of a clock, then pressing the "Download to Selected Clock" button.

NOTE: Your computer may repeatedly prompt you for information as to whether or not each new clock's network is Private, Work, or Public. Selecting the option for "Set all future networks as public" will help speed up this process, and prevent this prompt from appearing with each new clock.

3) Power additional clocks and place them into direct mode using Step 4 from the previous page.

4) wifiDirectLoader.exe will automatically program every clock that appears. Clocks can be identified by their Serial Number, which will appear as part of the name of each clock that appears in the field to the right of the buttons.

5) Once each clock is programmed, the clock may be powered down, then mounted on the wall using the instructions in the following sections. Battery-powered clocks may be left running, if the user wishes.

6) Once all clocks are programmed, exit out of wifiDirectLoader. You will be unable to access any other networks if wifiDirectLoader is still running.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Round SlimLine Clock - Battery Powered

VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

The Clock and all network equipment must be powered and configured before you install the clock. If the network equipment is not properly installed and powered, and if the clocks have not been configured to communicate with the network equipment, the clocks will not synchronize.

Included in Package

Included in Wiring Kit (A-SLM-M	K-S-1)	
Mounting Piece	1	
#6-19x7/16 screw	2 (not used)	
Strain Relief	1 (not used)	
Included in Gang Box Kit (A-GB-	MK-1)	
#6-32x1 screw	2 (not used)	
#6-19x3/8 screw	1 (not used)	
Included in Wiring Kit (A-WK-M	TG-1)	-
#10x1.5 Self-tapping screw	2	
Wall anchor	2	

PLEASE NOTE: A user will also have to provide two D-Cell batteries, a Phillips-head screwdriver, a small slot-head screwdriver, a drill with a 1/4 inch drill bit, a pencil, a single gang box, and any equipment needed to install the gang box.

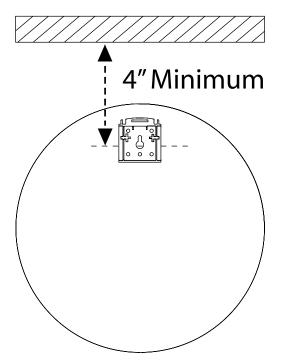

If any of the items listed in the wiring kit are missing, you may contact your dealer and order a replacement kit.

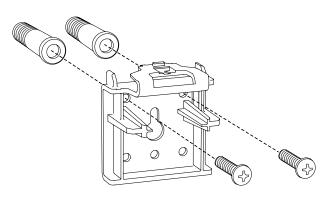

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Round SlimLine Clock - Battery Powered

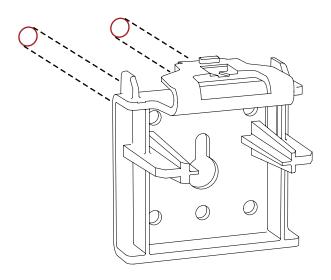

1) Place the mounting piece on the wall. Leave at least 4 inches between the top of the gang box and ceiling. Confirm that the bottom of the mounting piece is level with the floor.

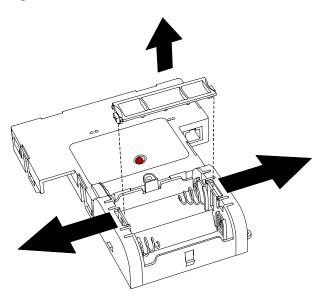

3) Insert the wall anchors into the two holes, then place the two self tapping screws through the mounting piece and into the wall anchors.

2) Use a pencil to mark the positions of the top two holes, then use the 1/4 inch drill bit to drill holes at the locations of the two marks.

4) Remove the back cover from the battery pack by pulling the two latches away to either side and sliding the cover out.

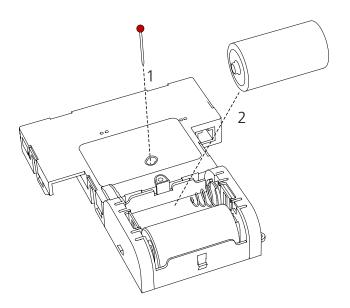

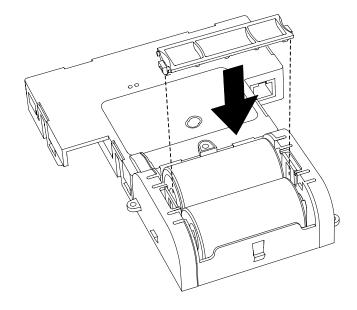

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Round SlimLine Clock - Battery Powered

5) **First remove the gearbox pin**, then insert the batteries into the clock.

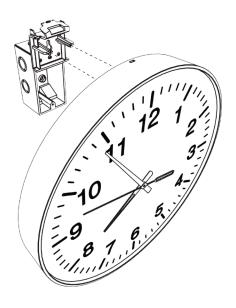

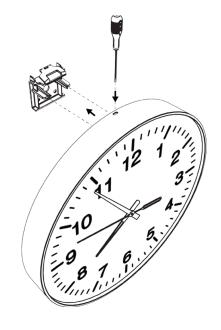

6) Place the cover back onto the battery pack. You should hear a snapping noise as the latches engage.

7) Attach the clock to the mounting piece by sliding the clock back onto it. You should hear a snapping noise as the latch engages.

8) If you need to take the clock off the wall after the installation has been completed, use a flat-blade screwdriver or eyeglasses screwdriver to lower the mounting piece latch, then slide the clock off the mounting piece.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Round SlimLine Clock - Locally Powered

VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

The Clock and all network equipment must be powered and configured before you install the clock. If the network equipment is not properly installed and powered, and if the clocks have not been configured to communicate with the network equipment, the clocks will not synchronize.

Included in Package

Description	Quantity	Picture
Round SlimLine analog clock	1	
Included in Wiring Kit (A-SLM-MK-S-1)

#6-19x7/16 screw	2	
Strain Relief	1	
Included in Gang Box Kit (A-GB-MK-1)		
#6-32x1 screw	2	
#6-19x3/8 screw Included in Wiring Kit (A-WK-MTG-1V)	1 (not used)	
Power/grounding wires and connector	1	
#8x1.5 Self-tapping screw	2	
Wall anchor	2	

PLEASE NOTE: A user will also have to provide a Phillips-head screwdriver, a small flat-blade screwdriver, a single gang box, any equipment needed to install the gang box, and any additional wiring needed to extend the power or ground cables. You may also need a 1/4 inch drill if you decide not to attach the clock directly to the gang box.

If any of the items listed in the wiring kit are missing, you may contact your dealer and order a replacement kit.

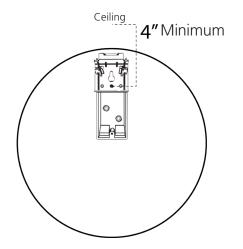

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Round SlimLine Clock - Locally Powered

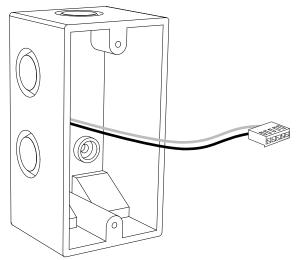

1) If you are installing a new gang box in the wall, leave at least 4 inches between the top of the gang box and ceiling. Confirm that the bottom of the gang box is level with the floor.

If you are using an existing gang box, the top of the gang box must be a minimum of four inches away from the ceiling.

3) Attach the power wires from your kit to the power wires in the gang box.

- Attach the Hot wire to the connector's black/ orange wire.
- Attach the Common wire to the connector's white/yellow wire.
- Attach the Ground wire to the connector's green wire.

2) Run power wiring to the gang box.

For 24V power use the ORANGE and YELLOW wires For 110VAC or 230VAC power use the BLACK and WHITE wires

CHECK YOUR WIRING

The voltage between the white and black wires should measure 105-126 volts AC in the 115 volt model, 207-253 volts AC in the 230 volt model, or 21.5-26.5 volts AC/DC in the 24 volt model.

If you are using the 24 volt model, make sure that the wiring leading to the clock is from an ISOLATED transformer.

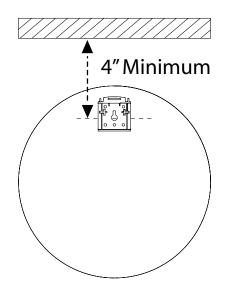

4) If you do not wish to attach the mounting piece to the gang box, proceed to step 5A. Otherwise, go to step 6.

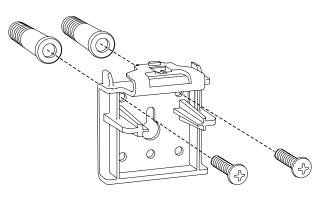

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Round SlimLine Clock - Locally Powered

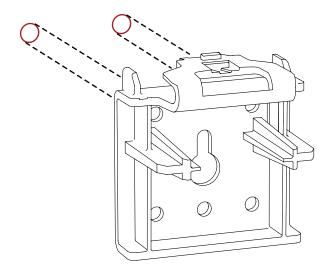

5A) If you do not wish to attach the mounting piece to a gang box, place the mounting piece on the wall. Leave at least 4 inches between the middle of the mounting piece and ceiling. Confirm that the bottom of the mounting piece is level with the floor.

5C) Insert the wall anchors into the two holes, then place the two self tapping screws through the mounting piece and into the wall anchors. Skip step 6 and go directly to step 7.

5B) Use a pencil to mark the positions of the top two holes, then use the 1/4 inch drill bit to drill holes at the locations of the two marks.

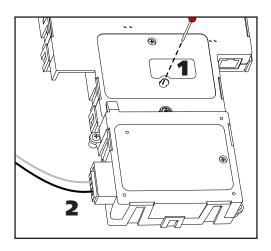

6) Place the mounting piece on the wall above the gang box so that the bottom centered hole on the piece overlaps the top hole on the gang box. Insert a #6-32x1 screw through the bottom centered hole and into the top hole of the gang box.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

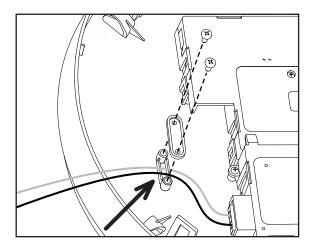

Wall Mount Installation - Round SlimLine Clock - Locally Powered

7) **First remove the gearbox pin**, then attach the power connector to the port on the movement.

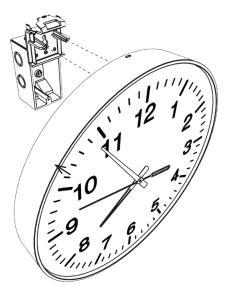

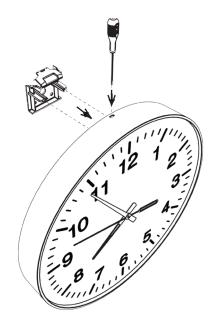

9) Attach the clock to the mounting piece by sliding the clock back onto it. You should hear a snapping noise as the latch engages.

8) Lay any excess wiring across the strain relief base, then attach the strain relief to the clock with the two #6-19x7/16 screws. The strain relief should be tight enough to prevent the wire from sliding.

10) If you need to take the clock off the wall after the installation has been completed, use a flat-blade screwdriver or eyeglasses screwdriver to press down on and release the mounting piece latch, then slide the clock off the mounting piece.

Wall Mount Installation - Round Aluminum or Wood Clock - Battery Powered

VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

Wall Mount Installation - Round Aluminum or Wood Clock - Battery Powered

9) Use the pencil to mark the location of the hole at the top of the release lever, and remove the clock again (see step 11). Remove the mounting piece and make a hole at the location you just marked with the 1/8 inch drill bit.

11) If you need to take the clock off the wall after the installation has been completed, remove the screw from the release lever, press the release lever down, then slide the clock off the mounting piece.

10) Reattach the mounting piece and clock. Place one of the self-tapping screws through the hole in the top of the release lever and into the wall.

12) If you need to take the clock off the wall after the installation has been completed AND you accidentally broke off the release lever or forgot to attach it during installation, take a thin flathead screwdriver, thin ruler, or eyeglass screwdriver and insert the end between the clock and the wall. Press down on the latch until you are able to slide the clock off the mounting piece.

Wall Mount Installation - Round Aluminum or Wood Clock - Locally Powered

VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

6A) If you do not wish to attach the mounting piece to a gang box, place the mounting piece on the wall. Leave at least 4 inches between the middle of the mounting piece and ceiling. Confirm that the bottom of the mounting piece is level with the floor.

6B) Use a pencil to mark the positions of the top two holes, then use the 1/4 inch drill bit to drill holes at the locations of the two marks.

6C) Insert the wall anchors into the two holes, then place the two self tapping screws through the mounting piece and into the wall anchors. Skip step 7 and go directly to step 8.

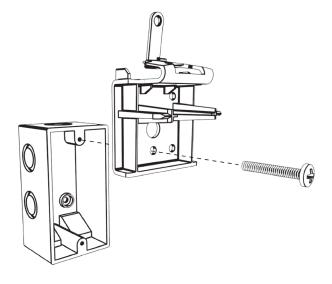

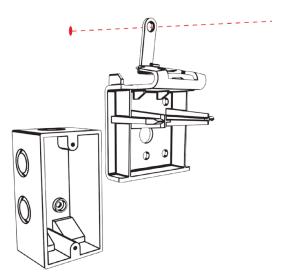

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Round Aluminum or Wood Clock - Locally Powered

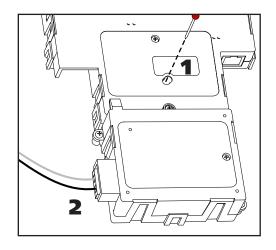

7) Place the mounting piece on the wall above the gang box so that the bottom centered hole on the piece overlaps the top hole on the gang box. Insert a #6-32x1 screw through the bottom centered hole and into the top hole of the gang box.

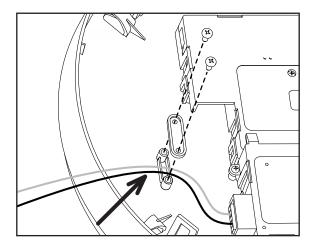

8) Temporarily attach the clock to the mounting piece (see step 11), use the pencil to mark the location of the hole at the top of the release lever, and remove the clock again (see step 13). Remove the mounting piece and make a hole at the location you just marked with the 1/8 inch drill bit. When finished, reattach the mounting piece.

9) **First remove the gearbox pin**, then attach the power connector to the port on the movement.

10) Lay any excess wiring across the strain relief base, then attach the strain relief to the clock with the two #6-19x7/16 screws. The strain relief should be tight enough to prevent the wire from sliding.

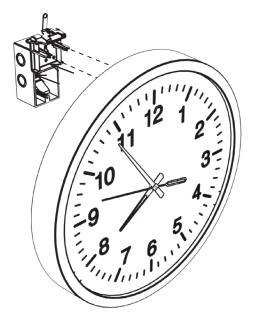

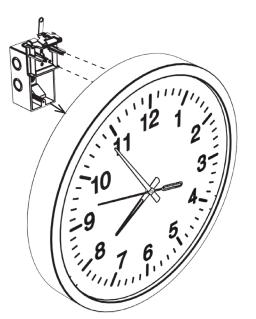

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Round Aluminum or Wood Clock - Locally Powered

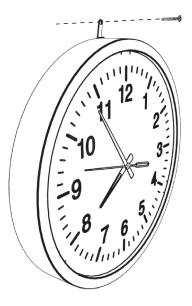

11) Attach the clock to the mounting piece by sliding the clock back onto it. You should hear a snapping noise as the latch engages.

13) If you need to take the clock off the wall after the installation has been completed, remove the screw from the release lever, press the release lever down, then slide the clock off the mounting piece.

12) Place one of the self-tapping screws through the hole in the top of the release lever.

14) If you need to take the clock off the wall after the installation has been completed AND you accidentally broke off the release lever or forgot to attach it during installation, take a thin flathead screwdriver, thin ruler, or eyeglass screwdriver and insert the end between the clock and the wall. Press down on the latch until you are able to slide the clock off the mounting piece.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Square Clock - Battery Powered

VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

The Clock and all network equipment must be powered and configured before you install the clock. If the network equipment is not properly installed and powered, and if the clocks have not been configured to communicate with the network equipment, the clocks will not synchronize.

Included in Package

Description	Quantity	Picture
Square analog clock	1	
Mounting Piece (already attached to clock housing)	1	
Included in Wiring Kit (A-WK-MTG	i-1)	
#8x1.5 Self-tapping screw	2	
Wall anchor	2	
Included in Gang Box Kit (A-GB-M	K-1)	
#6-32x1 screw	2 (not used)	
#6-19x3/8 screw	1 (not used)	

PLEASE NOTE: A user will also have to provide two D-Cell batteries, a Phillips-head screwdriver, a small slot-head screwdriver, a drill with a 1/4 inch drill bit, a pencil, a single gang box, and any equipment needed to install the gang box.

If any of the items listed in the wiring kit are missing, you may contact your dealer and order a replacement kit.

The Sapling Company, Inc. 670 Louis Drive Warminster, PA 18974 USA P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

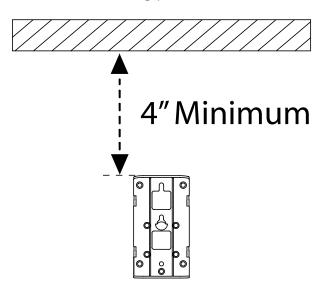

Wall Mount Installation - Square Clock - Battery Powered

Detach the housing from the back of the clock.
 Do this by inserting a flat-blade screwdriver about
 1/8 inch into each of the slot holes until the housing detaches from the clocks. You may hear a snapping noise as the latches disengage.

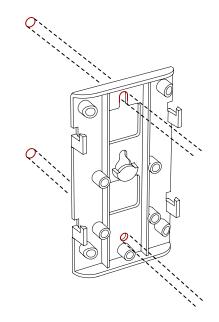

2) Release the mounting piece from the back of the housing by sliding it towards the center of the housing, then pulling it back and away from the housing.

3) Place the mounting piece on the wall. Leave at least 4 inches between the top of the mounting piece and ceiling. Take care to make sure that the bottom of the mounting piece is level with the floor.

4) Use a pencil to mark the two holes shown in the diagram below. Then use the 1/4 inch drill bit to drill holes at the marked positions.

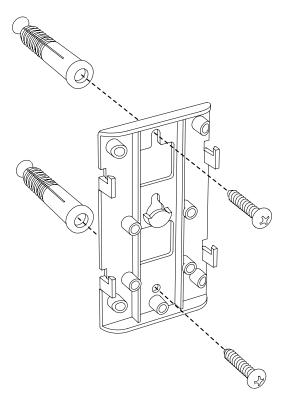

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

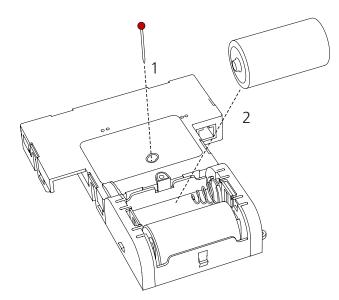

Wall Mount Installation - Square Clock - Battery Powered

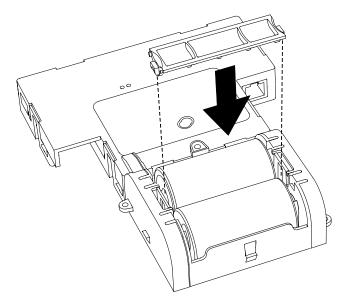

5) Insert the wall anchors into the holes, then place the self-tapping screws through the mounting piece and into the wall anchors. 6) Remove the back cover from the battery pack by pulling the two latches away to either side and sliding the cover out.

7) **First remove the gearbox pin**, then insert the batteries into the clock.

8) Place the cover back onto the battery pack. You should hear a snapping noise as the latches engage.

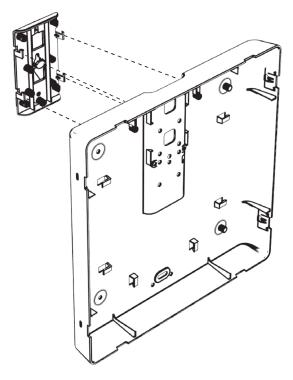

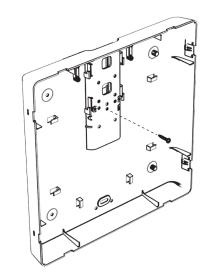

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Square Clock - Battery Powered

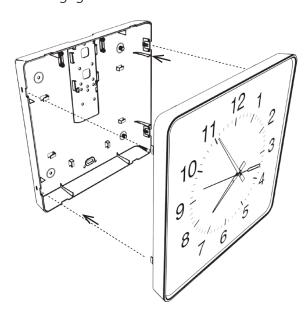

9) Slide the clock housing onto the mounting piece. If the housing does not slide on properly, tighten the screws that attach the mounting piece to the wall.

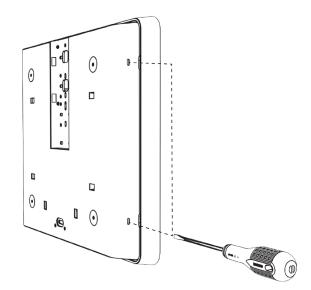

10) If you wish to prevent the clock from sliding off the mounting piece, use the small silver screw on the hole below the lower of the two #6-32x1 screws. Once the small screw is in place, test it by attempting to slide the housing up. The housing should not move.

11) Slide the clock back into the housing. You should hear a snapping noise as the latches reengage.

12) If you feel the need to take the clock off the wall after the installation has been completed, use a flat-blade screwdriver to detach the housing from the back of the clock, then use a Phillip's-head screwdriver to detach the mounting piece from the housing and gang box.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

The Clock and all network equipment must be powered and configured before you install the clock. If the network equipment is not properly installed and powered, and if the clocks have not been configured to communicate with the network equipment, the clocks will not synchronize.

Included in Package

Description	Quantity	Picture
Square analog clock	1	
Mounting Piece (already attached to clock housing)	1	
Included in Wiring Kit (A-WK-12-1V)	
Power/grounding wires And connector	1	
#8x1.5 Self-tapping screw	2 (not used)	
Wall anchor	2 (not used)	
Included in Gang Box Kit (A-GB-MK	-1)	
#6-32x1 screw	2	
#6-19x3/8 screw	1	

PLEASE NOTE: A user will also have to provide a Phillips-head screwdriver, a small flat-blade screwdriver, a single gang box, any equipment needed to install the gang box, and any additional wiring needed to extend the power or ground cables.

If any of the items listed in the wiring kit are missing, you may contact your dealer and order a replacement kit.

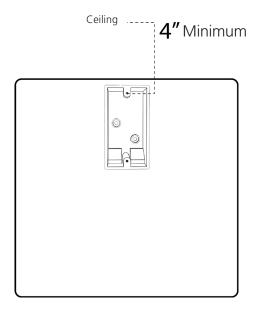

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Square Clock - Locally Powered

1) If you are installing a new gang box in the wall, leave at least 4 inches between the top of the gang box and ceiling. Confirm that the bottom of the gang box is level with the floor.

If you are using an existing gang box, the top of the gang box must be a minimum of four inches away from the ceiling.

3) Detach the housing from the back of the clock. Do this by inserting a flat-blade screwdriver about 1/8 inch into each of the slot holes until the housing detaches. You may hear a snapping noise as the latches disengage. 2) Run power wiring to the gang box.

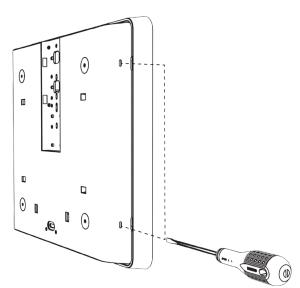

For 24V power use the ORANGE and YELLOW wires For 110VAC or 230VAC power use the BLACK and WHITE wires

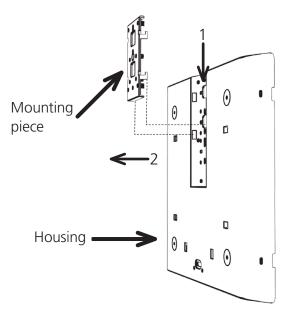

CHECK YOUR WIRING

The voltage between the white and black wires should measure 105-126 volts AC in the 115 volt model, 207-253 volts AC in the 230 volt model, or 21.5-26.5 volts AC/DC in the 24 volt model.

If you are using the 24 volt model, make sure that the wiring leading to the clock is from an ISOLATED transformer.

4) Release the mounting piece from the back of the housing by sliding it towards the center of the housing, then pulling it back and away from the housing.

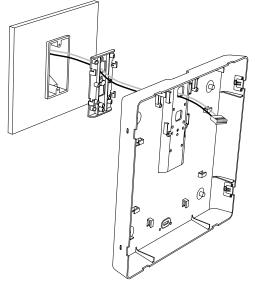

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

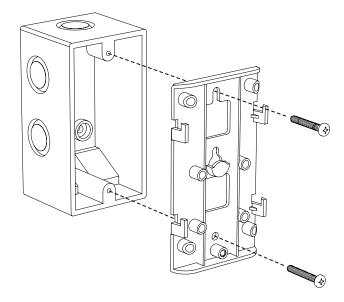

Wall Mount Installation - Square Clock - Locally Powered

5) Thread the power wires from your kit through the hole at the top of the housing followed by the mounting piece, then attach them to the wires in the gang box.

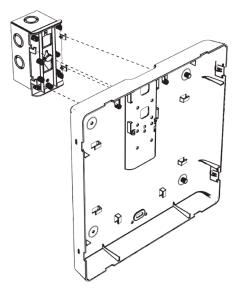

- Attach the Hot wire to the connector's black/ orange wire.
- Attach the Common wire to the connector's white/yellow wire.
- Attach the Ground wire to the connector's green wire.

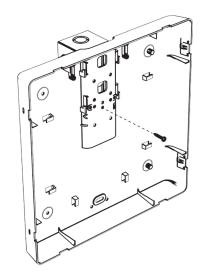

7) Slide the clock housing onto the mounting piece. If the housing does not slide on properly, tighten the screws that attach the mounting piece to the gang box. 6) Attach the mounting piece to the gang box using both of the #6-32x1 screws and a Phillips-head screwdriver.

8) If you wish to prevent the clock from sliding off the mounting piece, use the small, silver 6-19x3/8 screw on the bottom centered hole. Once the screw is in place, test it by attempting to slide the housing up. The housing should not move.

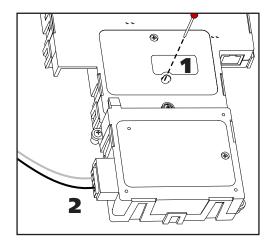

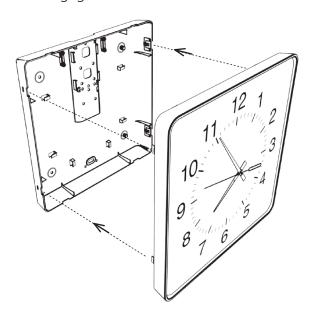

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Wall Mount Installation - Square Clock - Locally Powered

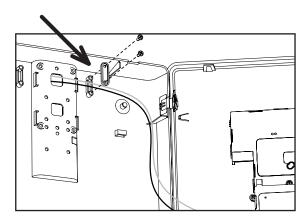

9) **First remove the gearbox pin**, then attach the power connector to the port on the movement.

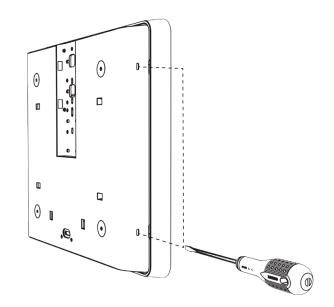

11) Slide the clock back into the housing. You should hear a snapping noise as the latches reengage.

10) Loosen the strain relief by unscrewing the two screws. Slip any excess wiring through it, then tighten the strain relief by reinserting and tightening the screws.

12) If you feel the need to take the clock off the wall after the installation has been completed, use a flat-blade screwdriver to detach the housing from the back of the clock, then use a Phillip's-head screwdriver to detach the mounting piece from the housing and gang box.

Flag Mount Installation - Round SlimLine/Aluminum Clock - Battery Powered

#6-19x3/8 screw	1 (not used)	

PLEASE NOTE: A user will also have to provide a Phillips-head screwdriver, a small slot-head screwdriver, a drill with a 1/4 inch drill bit, a pencil, a double gang box, four wall anchors that can support 50 lbs and a maximum screw size of 10x1.5", four #8 screws for the wall anchors, four #6-32x1 screws for attaching the mounting plate to the gang box, any equipment needed to install the gang box, and any additional wiring needed to extend the ground cables.

If any of the items listed in the wiring kit are missing, you may contact your dealer and order a replacement kit.

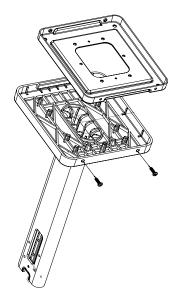

SlimLine and Aluminum Clocks use the same installation procedures for flag mount housings.

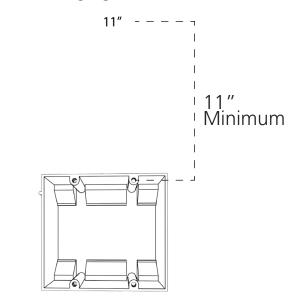

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Round SlimLine/Aluminum Clock - Battery powered

1) Detach the mounting plate from the mounting pole by unscrewing the two screws. Set the screws and pole aside for later.

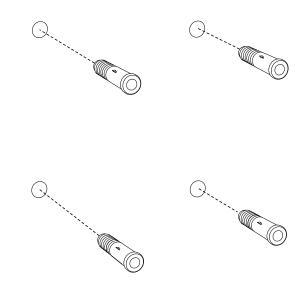

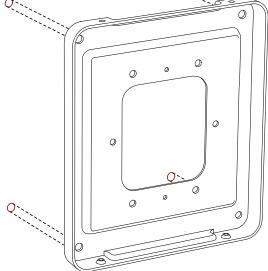

2) Place the mounting plate on the wall or ceiling. If you are installing a gang box in the wall, leave at least eleven inches between the top of the gang box and the ceiling. If you are installing the gang box in the ceiling, leave at least eleven inches between the gang box and the wall.

3) Confirm that the mounting plate is level with the floor. With the mounting plate as a guide, use the pencil to trace the locations of the four larger holes at the outer corners of the plate.

4) Remove the mounting plate and drill the four holes that were just traced. Insert the four wall anchors into the holes.

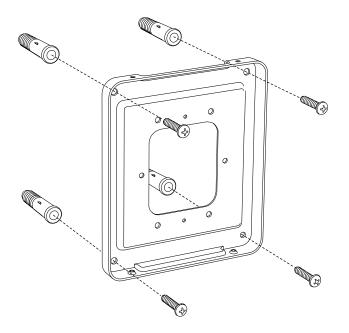

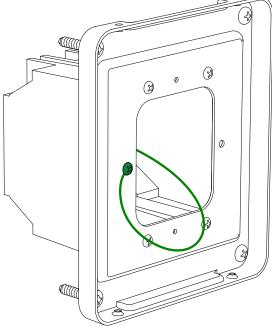

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Round SlimLine/Aluminum Clock - Battery powered

5) Insert the #8 screws through the mounting plate and into the anchors.

5B) If you are installing the clock atop an gang box, use the green screw to attach a grounding wire to the mounting plate.

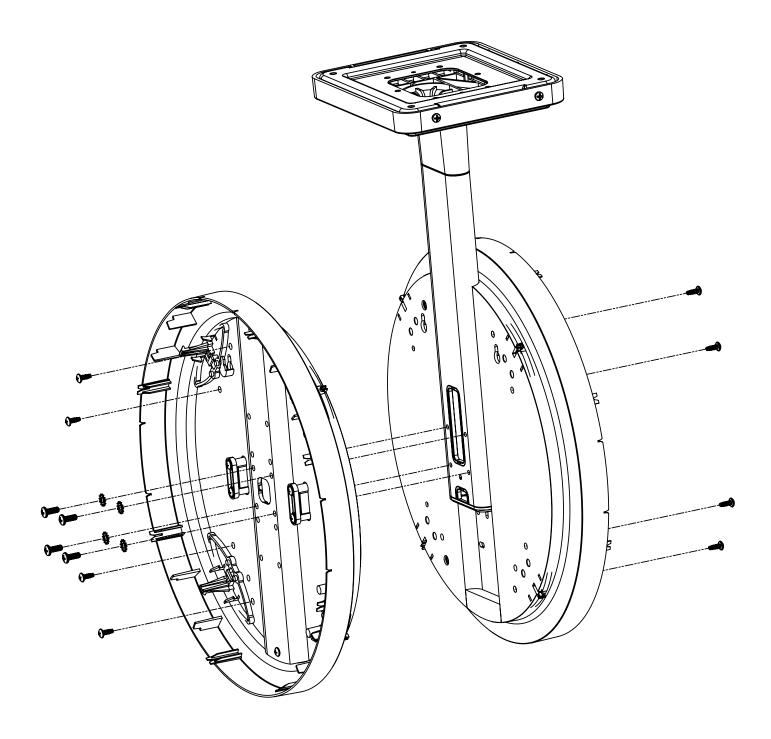

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Round SlimLine/Aluminum Clock - Battery Powered

6) Remove one of the included adapters. Unscrew the four screws that connect the adapter to the pole, and the eight screws that hold the two adapters to each other. You may keep the removed adapter and screws or throw them away, at your preference.

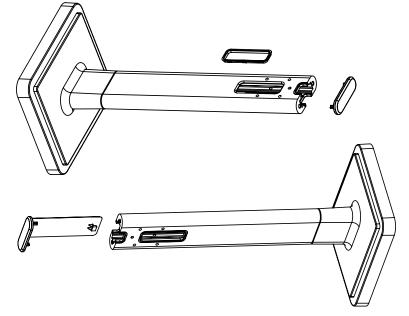

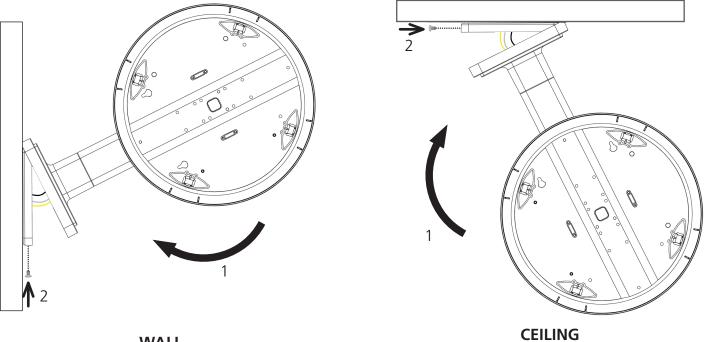

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Round SlimLine/Aluminum Clock - Battery Powered

7) Remove the pole endcap and plastic ring from the exposed pole side. Place the flag mount endcap on the end of the pole so that it coveres the exposed large rectangular hole.

8) Attach the base of the pole to the mounting plate so that the lip is on the top of the base, and the holes for the screws are on the bottom of the base. Hang the base on the mounting plate, attach the wires from the bottom of the pole to the wires in the gang box, then screw the other side of the base onto the mounting plate using the two black screws you set aside before.

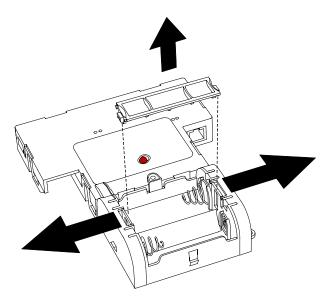

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

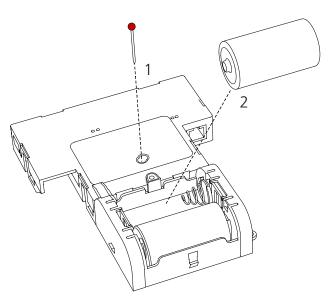

Flag Mount Installation - Round SlimLine/Aluminum Clock - Battery Powered

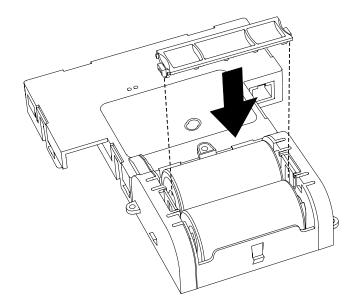

9) Remove the back covers from the battery pack by pulling the two latches away to either side and sliding the cover out.

10) **First remove the gearbox pin**, then insert the batteries into the clock. If the clock is within range of a powered transmitter, the hands should begin to move within a minute.

11) Place the cover back onto the battery pack. You should hear a snapping noise as the latches engage.

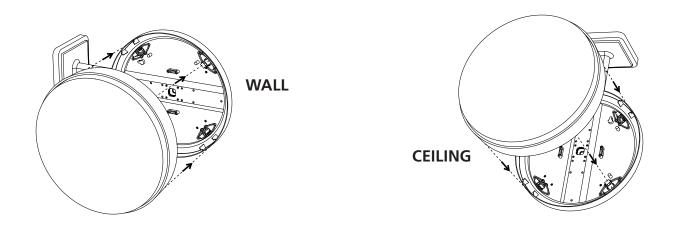

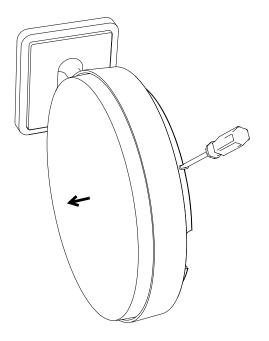

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Round SlimLine/Aluminum Clock - Battery Powered

12) Slide the clock onto the adapter in the rotation that you wish it to be viewed. You should hear a snapping noise as the four clips on the adapter secure the clock in place.

13) If you feel the need to detach the clock from the housing after the installation has been completed, use a flat-blade screwdriver on the four slots around the outside of the housing. You may hear a snapping noise as the internal latches disengage.

Flag Mount Installation - Round SlimLine/Aluminum Clock - Locally Powered

VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

The Clock and all network equipment must be powered and configured before you install the clock. If the network equipment is not properly installed and powered, and if the clocks have not been configured to communicate with the network equipment, the clocks will not synchronize.

PLEASE NOTE: A user will also have to provide a Phillips-head screwdriver, a small slot-head screwdriver, a drill with a 1/4 inch drill bit, a pencil, a double gang box, four wall anchors that can support 50 lbs and a maximum screw size of 10x1.5", four #8 screws for the wall anchors, four #6-32x1 screws for attaching the mounting plate to the gang box, any equipment needed to install the gang box, and any additional wiring needed to extend the ground cables.

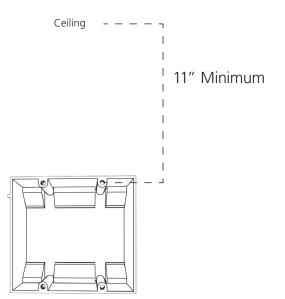

If any of the items listed in the wiring kit are missing, you may contact your dealer and order a replacement kit.

SlimLine and Aluminum Clocks use the same installation procedures for flag mount housings.

Flag Mount Installation - Round SlimLine/Aluminum Clock - Locally Powered

1) Install the double gang box in the wall or ceiling. If you are installing the gang box in the wall, leave at least eleven inches between the top of the gang box and the ceiling. If you are installing the gang box in the ceiling, leave at least eleven inches between the gang box and the wall. The box should be installed level and plumb with the wall and ceiling.

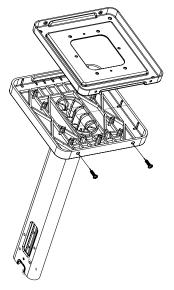

2) Run power wiring to the gang box.

For 24V power use the ORANGE and YELLOW wires For 110VAC or 230VAC power use the BLACK and WHITE wires

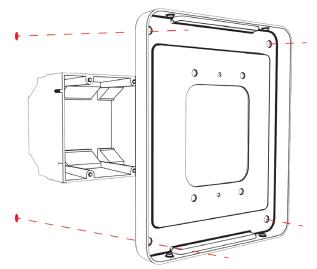

CHECK YOUR WIRING The voltage between the white and black wires should measure 105-126 volts AC in the 115 volt model, 207-253 volts AC in the 230 volt model, or 21.5-26.5 volts AC/DC in the 24 volt model. If you are using the 24 volt model, make sure

that the wiring leading to the clock is from an ISOLATED transformer.

3) Detach the mounting plate from the mounting pole by unscrewing the two screws. Set the screws and pole aside for later.

4) Attach the mounting plate to the gang box using only two of the four long, silver #6-32x1 screws. With the mounting plate as a guide, use the pencil to trace the locations of the four larger holes at the outer corners.

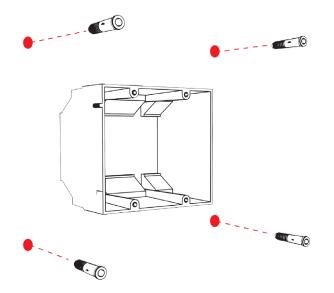

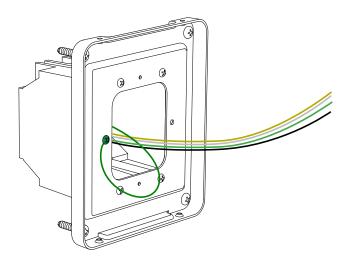

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Round SlimLine/Aluminum Clock - Locally Powered

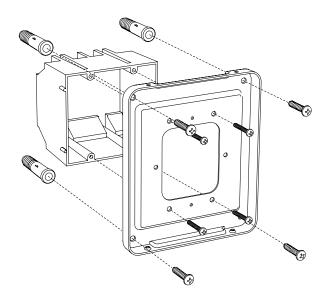

5) Remove the mounting plate and drill the four holes that were just traced. Insert the four wall anchors into the holes.

7) Thread any wiring through the mounting plate, and attach a grounding wire to the mounting plate using one of the larger centered holes and the #10-32x3/8 screw.

6) Reattach the mounting plate, this time using all four long, silver #6-32x1 screws, then insert the four #8 screws through the mounting plate and into the anchors.

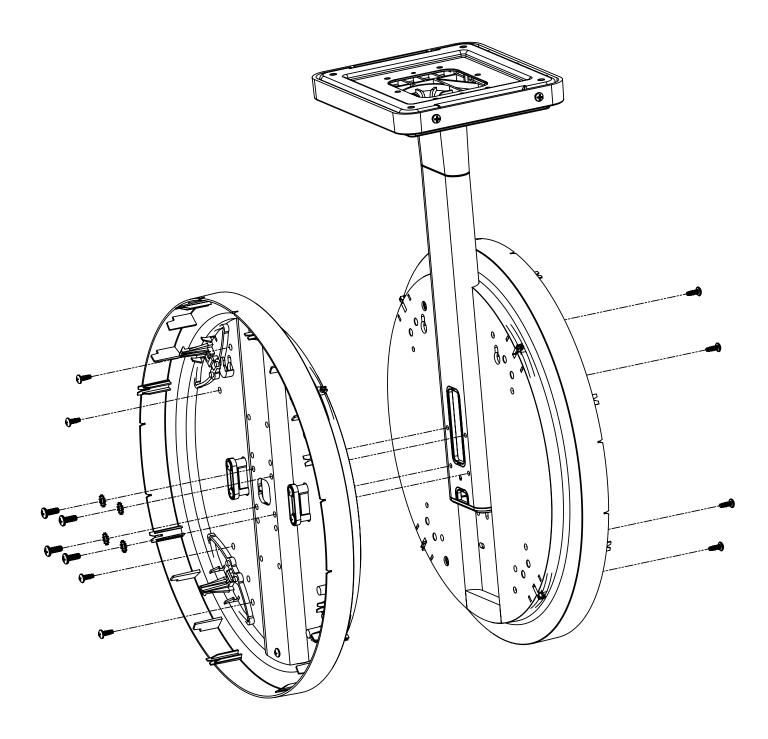

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Round SlimLine/Aluminum Clock - Locally Powered

8) Remove one of the included adapters. Unscrew the four screws that connect the adapter to the pole, and the eight screws that hold the two adapters to each other. You may keep the removed adapter and screws or throw them away, at your preference.

Included in Package		
Description	Quantity	Picture
Power/grounding wires And connector	1	
#8x1.5 Self-tapping screw	2 (not used)	
Wall anchor	2 (not used)	
Included in Gang Box Kit (A-GB-MK-1)		
#6-32x1 screw	2 (not used)	
#6-19x3/8 screw	1 (not used)	

PLEASE NOTE: A user will also have to provide a Phillips-head screwdriver, a small flat-blade screwdriver, a drill with a 1/4 inch drill bit, a pencil, a double gang box, four wall anchors (must support 50 lbs, #8 screw size, 1.5"(3.8cm) screw length), four #8 screws for the wall anchors, two additional #6-32x1 screws for attaching the mounting plate to the gang box, any equipment needed to install the gang box, and any additional wiring needed to extend the power or ground cables.

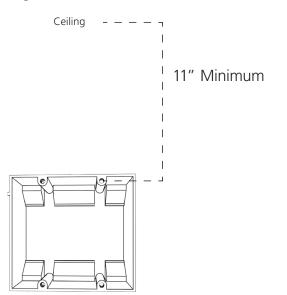

If any of the items listed in the kits are missing, you may contact your dealer and order a replacement kit.

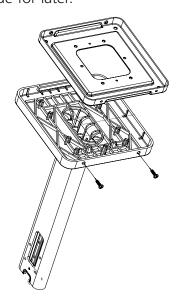

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Square Clock - Locally Powered

1) Install the double gang box in the wall or ceiling. If you are installing the gang box in the wall, leave at least eleven inches between the top of the gang box and the ceiling. If you are installing the gang box in the ceiling, leave at least eleven inches between the gang box and the wall. The box should be installed level and plumb with the wall and ceiling.

3) Detach the mounting plate from the mounting pole by unscrewing the two screws. Set the screws and pole aside for later.

2) Run power wiring to the gang box.

For 24V power use the ORANGE and YELLOW wires.

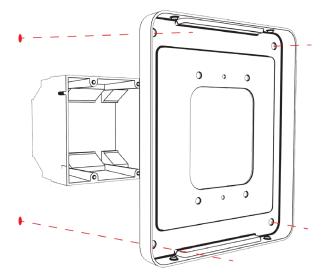

For 110V power use the BLACK and WHITE wires.

CHECK YOUR WIRING

The voltage between the white and black wires should measure 105-126 volts AC in the 115 volt model, 207-253 volts AC in the 230 volt model, or 21.5-26.5 volts AC/DC in the 24 volt model.

If you are using the 24 volt model, make sure that the wiring leading to the clock is from an ISOLATED transformer.

4) Attach the mounting plate to the gang box using only two of the four long, silver #6-32x1 screws. With the mounting plate as a guide, use the pencil to trace the locations of the four larger holes at the outer corners.

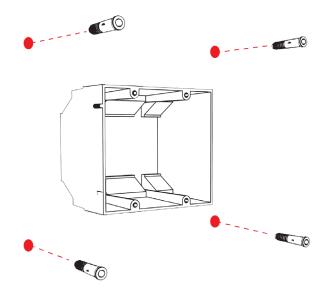

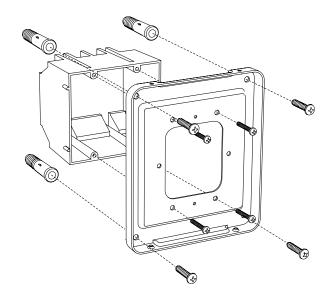

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Square Clock - Locally Powered

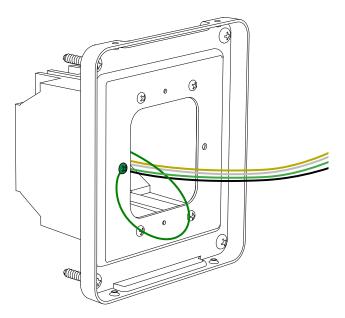

5) Remove the mounting plate and drill the four holes that were just traced. Insert the four wall anchors into the holes.

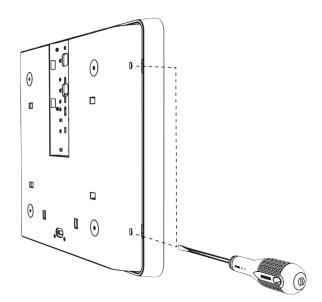

6) Reattach the mounting plate, this time using all four long, silver #6-32x1 screws, then insert the four #8 screws through the mounting plate and into the anchors.

7) Thread any wiring through the mounting plate, and attach a grounding wire to the mounting plate using one of the larger centered holes and the #10-32x3/8 screw.

 B) Detach the housing from the back of each clock.
 Do this by inserting a flat-blade screwdriver about 1/8 inch into each of the slot holes until the piece detaches. You may hear a snapping noise as the latches disengage.

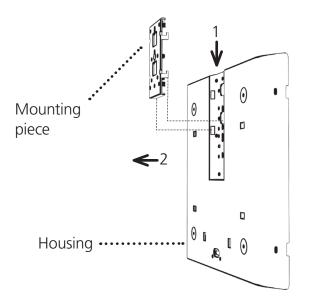

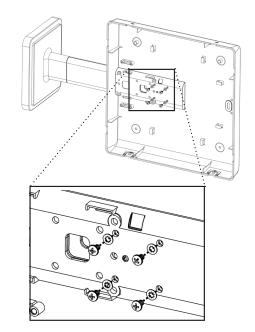

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Square Clock - Locally Powered

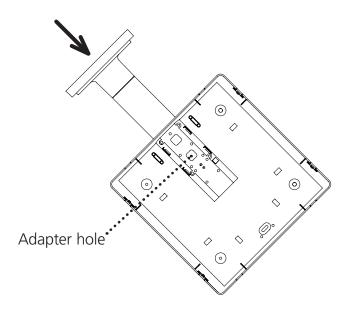

9) Release the mounting piece from the back of the housing by sliding it towards the center of the housing, then pulling it back and away from the housing. You will not need the mounting pieces later; either store them or throw them away at your discretion. **DO NOT THROW AWAY THE HOUSINGS.**

10) Attach the clock housing to the pole using four black #8-32x7/16 screws and four internal-tooth washers.

11) Thread at least fifteen inches (38.1cm) of wiring from the gang box through the bottom of the pole until each wire exits through the hole in the adapter.

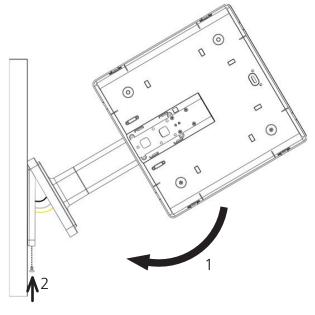

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Square Clock - Locally Powered

12) Attach the base of the pole to the mounting plate, so that the lip is on the top of the base, and the holes for the screws are on the bottom of the base. Hang the base on the mounting plate, attach the wires from the bottom of the pole to the wires in the gang box, then screw the other side of the base onto the mounting plate using the two black screws you set aside before.

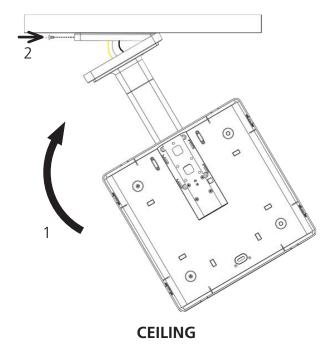

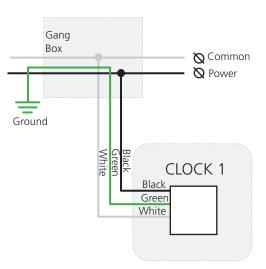

WALL

13) Attach the power wires from your kit to the wires you threaded through the pole.

- Attach the Hot wire to the connector's black/ orange wire.
- Attach the Common wire to the connector's white/yellow wire.
- Attach the Ground wire to the connector's green wire.

Consult the diagram on the right for additional help.

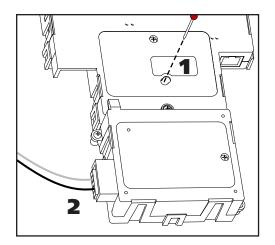

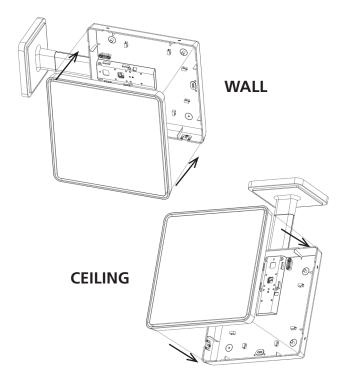

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Flag Mount Installation - Square Clock - Locally Powered

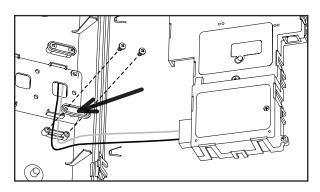

14) **First remove the gearbox pin**, then attach the power connector to the port on the movement.

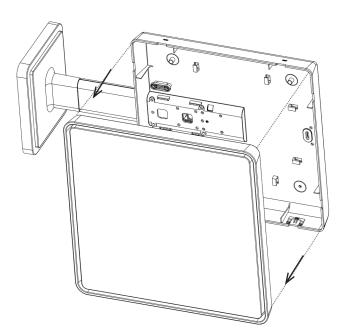

16) Rotate the clock so that it is right-side up. Slide the clock back into its housing. You should hear a snapping noise as the latches reengage.

15) Loosen the strain relief by unscrewing the two screws. Slip any excess wiring through them, then tighten the strain relief by reinserting and tightening the screws.

17) If you feel the need to detach the clock from the housing after the installation has been completed, use a flat-blade screwdriver on the four slots around the outside of the housing. You may hear a snapping noise as the internal latches disengage.

Double Mount Installation - Round SlimLine/Aluminum Clock - Battery Powered

VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

The Clock and all network equipment must be powered and configured before you install the clock. If the network equipment is not properly installed and powered, and if the clocks have not been configured to communicate with the network equipment, the clocks will not synchronize.

17) Slide both clocks back into their housings. You should hear a snapping noise as the latches reengage.

16) Loosen the strain relief by unscrewing the two screws. Slip any excess wiring through them, then tighten the strain relief by reinserting and tightening the screws.

18) If you feel the need to detach the clock from the housing after the installation has been completed, use a flat-blade screwdriver on the four slots around the outside of the housing. You may hear a snapping noise as the internal latches disengage.

Connecting to the Clock

Access to the clock can be controlled through the WIFI SW button. Pressing the button a given number of times will perform the following actions.

- 1. Start Wi-Fi transmitter in Connection Mode.
- 2. Start Wi-Fi transmitter in Direct Mode
- 3. Cancel Current Mode and resume normal operation.

The functions of each mode are as follows:

Connection Mode - In connection mode, a properly configured Wi-Fi clock is accessible over the facility's network, and will appear on a Network Monitor located on the same subnet. The green LED on the far right side will turn on and remain on when Connection Mode is enabled.

If the web interface is not accessed within four minutes of Connection Mode being activated, the clock will automatically Cancel Current Mode and resume normal operations.

Direct Mode - In Direct mode, a Wi-Fi clock acts as its own Wireless Access Point and can be accessed directly from any Wi-Fi capable computer in range of it. In this mode, a clock will wait four minutes for the user to access it before automatically deactivating its Wi-Fi transceiver. The Orange LED on the far right side will turn on and remain on when Direct Mode is enabled.

While in Direct mode, the clock will temporarily change its IP address to 192.168.240.1. It will revert to whichever IP address is listed on the Network Settings address page once Direct mode has been ended.

If the web interface is not accessed within four minutes of Direct Mode being activated, the clock will automatically Cancel Current Mode and resume normal operations.

Cancel Current Mode - When the WIFI SW button has been pressed three times, the Wi-Fi transceiver will cancel its current mode.

In battery-powered clocks, the transceiver will continue to obtain time data at the scheduled intervals, but the web interface will remain inaccessible until Connection Mode or Direct mode is enabled again.

In locally-powered clocks, the web interface will continue to be accessible. This action would simply cancel Direct Mode and revert the clock to Connection mode.

If the clock loses power for any reason, it will enter Connection Mode for one minute after power is restored to the clock. If the web interface is not accessed within that minute, the clock will automatically Cancel Current Mode and resume normal operations.

Network Monitor Software - Main Screen

YOUR COPY OF THE NETWORK MONITOR MAY HAVE ADDITIONAL COLORS OR BRANDING. THE MONITOR SHOWN IN THIS MANUAL CONTAINS NO BRANDING

OR COLORS. ALL FEATURES REMAIN THE SAME.

1. **Device List** - Displays all of the relevant IP devices that are active on the system subnet. The monitor screen displays the name of the clock, serial number, type of clock, IP address, last updated time, how long the clock has been running, and the status of the clock. Double clicking on a device in the device list will open the web interface for that device.

Using a right-handed mouse to right-click on any row in the Device List will open the **Quick Access Menu**. See the section in this manual labeled "Network Monitor Software - Quick Access Menu" for more information.

2. Task Bar - See the section in this manual labeled "Network Monitor Software - Task Bar Options"

3. **Show Priority** - By selecting this option, the IP device(s) that the user previously "marked as priority" will be the only clocks shown in the program window.

4. **Device Count** - This number is the amount of IP devices that are displayed on the Network Monitor Software.

The Network Monitor has two subtypes:

CFA - Intended for use with Wi-Fi Clocks, Master Clocks, Network Repeaters, Wi-Fi and Wired-IP Large Digital Clocks, and Network Repeaters.

CFL - Intended for use with IP-PoE Digital and IP-PoE Analog Clocks.

You can check the type by clicking on "Version" (5) at the top of the Monitor window.

1. Send Message to Digital Clocks - Allows the user to generate a message that will be sent to digital clocks.

a. Enter Password - The default password is 6063

b. **Message to be displayed -** Lets the user enter a message to be displayed on digital clocks. Messages may consist of the digits 0-9 and the English letters A-Z. The message is generated in a font that matches its appearance on the clock, so you can preview the appearance of each message before sending it. The message will repeat ten times once sent.

c. **Send to Selected Clocks -** Applies the message to whichever clocks have been highlighted on the Device List.

Send Message to be dis	splayed on Digital Clocks
A Enter Password:	
B ^{Message to be displayed:}	
Send to Selected Clocks	Send to All Digital Clocks
С	D

d. **Send to All Digital Clocks -** Applies the message to all IP-PoE Digital, Wi-Fi Digital, and Large Digital Clocks.

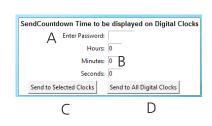

2. Send Countdown to Digital Clocks - Allows the user to generate a countdown that will be sent to digital clocks.

a. Enter Password - The default password is 6063

b. **Start values -** Enter the starting hour, minute, and second into the fields. For example, entering a 1 into each field will start a countdown from 1:01:01

c. **Send to Selected Clocks -** Applies the countdown to whichever clocks have been highlighted on the Device List.

d. **Send to All Digital Clocks -** Applies the countdown to all IP-PoE Digital, Wi-Fi Digital, and Large Digital Clocks.

1.Download Configuration to Clocks - If a configuration file was created using "Upload and Save Configuration" on the Quick Access Menu, this option lets the user apply the configuration file to other clocks highlighted within the monitor. For more information, see the section of this manual labeled "Network Monitor Software - Quick Access Menu."

Pressing this button will cause the Download Configuration window to appear:

a. Enter Password - The default password is 6063

b. **Select Configuration -** Pressing the button allows the user to browse their computer for a previously-saved configuration file.

c. **Send to Selected Clocks -** Applies the configuration file to whichever clocks have been highlighted on the Device List.

d. **Send to All Valid Clocks -** Applies the configuration file to all applicable devices on the Device List. For instance, an Analog IP clock configuration file would be applied to every Analog IP clock on the Device List.

1. Send - When clicked, this button will display the following options:

Send Message - Performs the same action as the Send Message to Digital Clocks button. Applies only to Digital Clocks.

Send Looping Message - Refer to the section of this manual, "Network Monitor Software - Quick Access Menu." Applies only to Digital Clocks.

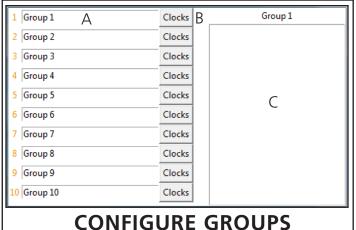

Send Countdown - Performs the same action as the Send Countdown to Digital Clocks button. Applies only to Digital Clocks.

Find Hands - Commands Analog Clocks to resynchronize their hands. The user will be prompted to enter a password to authenticate their permissions. This command can be sent to one analog clock, a selected group of analog clocks, or all of the analog clocks in the system. Applies only to analog clocks.

2. Groups - When clicked, this button will open the Groups drop-down menu.

All - Clicking on this option will cause the monitor to display all compatible IP devices on the network.

"Group Name" - Clicking on the name of a group will cause the monitor to display all of the IP devices in that group. Example: Clicking on "Group 1" will cause the monitor to show only the devices that have been added to Group 1 through the Configure Groups menu.

Configure Groups - Opens the group configuration menu (see left).

A. Text Boxes - Entering a name into the text box will change

the name of the group. For example, the first text box currently contains the name "Group 1". This will cause the first group to be shown as "Group 1" in the drop-down menu.

B. Clocks buttons - Clicking on a Clocks button will display each of the group's devices in the box to the right.

C. Device Box - Displays the devices for the selected group. The name of the selected group will appear above the device box.

To add a device to the group, click on a device on the Network Monitor. While holding down the button on the mouse, drag the name of the device over to the device box, then release the button on the mouse.

To remove a device from the group, click on a device in the device box. While holding down the button on the mouse, drag the name of the device outside of the device box, then release the button on the mouse.

3. Filters - When clicked, this button will display the following options:

Filter By Clock Type - By selecting this option, the user is able to view specific clock types on the Monitor Screen. The clock types users can filter through are: Master Clocks, Network Repeaters, Wi-Fi Analog, Wi-Fi Digital, IP Analog, and/or IP Digital clocks. When the box next to the clock type is checked, the user will be able to view that clock type on the Monitor Screen.

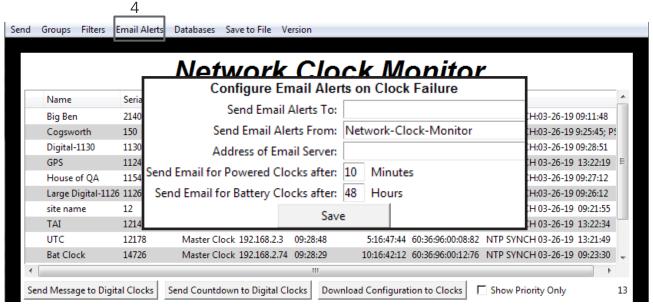

Filter By Name - By selecting this option, the user is able to search for specific clocks by name on the Monitor Screen. The user must type in the name of a clock and check the box next to the word Enable. Once checked, the clocks that match the name will appear.

Please Note: When using this option, the submitted name must be identical to the name of the clock in order to receive a match. There are a few special sequences/characters listed below that may be used when filtering by name:

*	Matches any sequence of 0 or more characters in the name
?	Matches any single character in the name
[chars]	Matches any character in the set given by chars. If a sequence of the form x-y appears in chars, then any character between x and y, inclusive, will match.
{[A-Za-z]}	Will match any alphabetical character.
\x	Matches the single character x. This provides a way of avoiding the special interpretation of the characters *?[]\ in pattern.

Network Monitor Software - Task Bar Options

4. Email Alerts - When clicked, this button will display the following options:

Enable Missing Clock Email Alerts - By selecting this option, the user will receive an email alert if the Network Monitor Software hasn't heard from a listed clock or other network device after a certain amount of time. This function will not work if the monitor is turned off. Does not apply to battery-powered clocks.

Enable Low Battery Email Alerts - By selecting this option, the user will receive an email alert if a battery-powered Wi-Fi Analog clock is synchronizing while low on batteries. This function will not work if the monitor is turned off. Applies only to battery-powered analog clocks. This option is not available with the CFL version of the monitor.

Configure Email Alerts - By selecting this option, the user is able to choose which email address the alerts are sent to, the email identity of the sender, the address of the email server, and the amount of time between an event and the email being sent. Once the information is filled in, click the save button. When pressed, this will save all of the settings that were entered.

Send Test Email - By selecting this option, the user is able to send a test email to the email address specified in the Configure Email Alerts option.

Ser	nd Message to Digit	al Clocks Se	end Countdowr	n to Digital Cl	ocks Down	load Configurat	ion to Clocks	Show Priority Only	13

5. Databases - When clicked, this button will display the following options:

Download Configuration - By selecting this option, the user can load a clock's setting from a PC to another clock of the same type.

Upload Configuration - By selecting this option, the user can load the settings from a Wi-Fi clock and save them to a PC.

Get Wi-Fi Clock Firmware From Server - Updates software on the selected clock by downloading the latest version from Internet update servers. Applies only to Wi-Fi enabled clocks. This option is not available with the CFL version of the monitor.

Get Wi-Fi Clock Web Pages From Server - Updates software on the selected clock's network card and web interface by downloading the latest version from Internet update servers. Applies only to Wi-Fi enabled clocks. This option is not available with the CFL version of the monitor.

6. **Save to File** - When clicked, allows the user to save the all of the information in the Network Monitor device list as a .CSV file, which can be printed from Microsoft Excel. If the monitor is showing devices from a specific Group, then the .CSV file will contain only the devices in that group.

7. **Version** - When clicked, this button will display version number information of the Network Monitor Software and the Software Version Number (SVN). This information is needed only when contacting technical support and will not affect your usage of the Network Monitor Software. This button will also display the Monitor subtype.

The Network Monitor has two subtypes:

CFA - Intended for use with Wi-Fi Clocks, Master Clocks, Network Repeaters, Wi-Fi Large Digital Clocks, and Network Repeaters.

CFL - Intended for use with IP-PoE Digital, Wired IP Large Digital, and IP-PoE Analog Clocks.

Using a right-handed mouse to right-click on any row in the Device List will open the Quick Access Menu.

- 1. **Remove from Display** When clicked, this option will remove the selected clock from the Device List.
- 2. Clear Selections This option will deselect any highlighted items on the Device List.

3. **Mark as Priority** - Marking a clock(s) as priority is another filtering option for a user to segment the clocks. Once a clock is marked as priority, there will be an asterisk (*) next to the chosen clock.

4. Send Message to Clocks - Performs the same action as the Send Message to Digital Clocks button.

5. Send Countdown to Clocks - Performs the same action as the Send Countdown to Digital Clocks button.

6. **Send Looping Message to Clocks** - Performs a similar action to the Send Message to Digital clocks, but allows the user to select the number of times that the message will repeat. It also provides a longer text box for sending longer messages.

7. **Send Numeric Message to Clocks** - Performs the same action as the Send Message to Digital Clocks button, but messages are limited to four digits consisting of numbers 0-9.

Using a right-handed mouse to right-click on any row in the Device List will open the Quick Access Menu.

5. Download Configuration to Clock - If a configuration file was created using "Upload and Save Configuration" on the Quick Access Menu, this option lets the user apply the configuration file to other clocks highlighted within the monitor. This function will not work with Wi-Fi enabled clocks in Direct Mode. Clicking on this item will cause the Download Configuration window to appear:

A. Enter Password - The default password is 6063

B. Select Configuration - Pressing the button allows the user to browse their computer for a previously-saved configuration file.

C. Send to Selected Clocks - Applies the configuration file to whichever clocks have been highlighted on the Device List.

D. Send to All Valid Clocks - Applies the configuration file to all applicable devices on the Device List. For instance, a Digital IP clock configuration file would be applied to every Digital IP clock on the Device List.

6. Upload and Save Configuration - By selecting this option, the user can copy the settings from an IP device and save them to whichever computer is running the Network Monitor. Your computer will automatically prompt you for the location of the saved configuration file. This function will not work with Wi-Fi enabled clocks in direct mode.

7. Get Wi-Fi Clock Firmware From Server - Updates software on the clock by downloading the latest version from the manufacturer's cloud server. Applies only to Wi-Fi enabled clocks. This option is not available with the CFL version of the monitor.

8. Get Wi-Fi Clock Web Pages From Server - Updates software on the network card and web interface by downloading the latest version from the manufacturer's cloud server. Applies only to Wi-Fi enabled clocks. This option is not available with the CFL version of the monitor.

9. Delete All Entries - Clears all clocks from the Monitor. Clocks will be re-added to the monitor as they check in.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Network Monitor Software - Error messages

1. **Characters are Red** - When the characters of a clock have turned red, then the clock has not sent its status within the last 10 minutes.

2. **Characters are Gray** - When the characters of a clock have turned gray, then the clock was once displayed on the Network Monitor, but upon launching the Network Monitor program this most recent time, the clock cannot be found on the network.

3. **Characters are Black** - When the characters of a clock are black, this means that the clock is working normally.

The CFA and CFL versions of the Monitor cannot run at the same time. If managing Wi-Fi clocks and IP clocks at the same time, use the CFA Network Monitor instead of the CFL Network Monitor. Be aware, not all features on the CFA Monitor will function on IP-LAN clocks.

You can check if you have the CFA or CFL version by clicking on "Version" at the top of the monitor window.

Web Interface - Log In

SAPLING WIFI CONFIG			
1 Password(Show):			
2 Submit			

1. **Password** - Location where the password is entered. The default password is 6063, but this can be changed within the settings. Hovering the cursor over the word "Show" will return any characters entered into the password field to their normal appearances.

2. **Submit** - When pressed, the program will check the password. If the password is correct, it will grant the user access to the Web Interface.

Web Interface - Home Page

1. **Network Settings** - Takes the user to the Network Settings page. Network Settings includes any setting used by the clock to communicate with the network.

2. **General Settings** - Takes the user to the General Settings page. General Settings includes settings for Time Configuration, Daylight Saving Time, NTP Servers, and Login Settings.

3. **Diagnostics** - Takes the user to the Diagnostics page.

4. Log Out - Logs the user out of the clock software. The user will need to log back in before they are able to change any settings.

5. **Software Updates** - Takes the user to the Software Updates page.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

NETWORK SETTINGS

1. **Clock Name** - This field allows the user to set a name used to identify the clock on the Network Monitor. This name is also used to identify the clock in a network list while the clock is in Direct-Connect mode. The name must be fewer than 26 characters.

2. Serial Number - The clock's serial number. It cannot be changed.

3. MAC Address - This field shows the clock's permanent machine address. It cannot be changed.

4. **Select Network** - The clock scans for access points that are broadcasting their network name (SSID), and allows the user to select one instead of manually entering the name in the Network box. You may need to referesh the web page for more network names to appear. **SSIDs must use only English letters, numbers, and spaces. No symbols**.

5. **Network** - This field allows the user to connect the clock to a wireless network by entering the network name (SSID). The information in this field is overridden if a value was selected in the Select Network field. **SSIDs must use only English letters, numbers, and spaces. No** symbols.

6. **Network Password** - This field allows the user to connect the clock to a wireless network by entering the network password. Network passwords must be 32 characters or fewer. The characters of the password can be shown by placing the computer's cursor over the word "show"**THIS IS ALSO USED AS THE PASSWORD FIELD FOR WPA2-Enterprise NETWORKS.**

7. **DHCP Auto On** - Allows the user to set whether or not the clock will use a DHCP server to determine the IP address for the clock.

8. **IP Address** - This field will display the clock's IP address. If DHCP Auto On is enabled, this address will be assigned by the DHCP server. If DHCP Auto On is disabled, then the user may set their own static IP address.

NETWORK SETTINGS

16 Enterprise Settings Submit 17

9. Subnet Mask - This field allows the user to set the subnet mask for their clock. If DHCP Auto On is enabled, this address will be assigned by the DHCP server. If DHCP Auto On is disabled, then the user may set their own subnet mask.

10. Gateway Address - This field allows the user to set the gateway IP address. If DHCP Auto On is enabled, this address will be assigned by the DHCP server. If DHCP Auto On is disabled, then the user may set their own Gateway Address.

11. Auto DNS - Allows the user to set whether or not the clock will obtain an Domain Name Server (DNS)address from the network's DHCP server.

12. DNS Address - This field allows the user to set the DNS Server IP address. If Auto DNS is enabled, this address will be assigned by the DHCP server. If Auto DNS is disabled, then the user may set their own DNS Address.

13. Broadcast to Monitors - Broadcasts the clock's presence to all instances of Network Monitor Software running on the network.

14. Send Specific Monitor IP - When set to ON, broadcasts the clock's presence to an instance of the Network Monitor Software running on a specific IP address.

15. Monitor IP Address - When Send Specific Monitor IP is set to ON, the clock will broadcast its presence to the IP address entered in this field. If Send Specific Monitor IP is set to off, this field is not accessible.

16. Enterprise Settings - Takes the user to a page for WPA2 Enterprise Encryption Settings.

17. Submit - Applies any changes to the previous options when pressed. Note that changes to some fields, including IP Address, Subnet Mask, and DNS Address will not be applied until the clock is power-cycled.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Web Interface - Enterprise Encryption Settings

WPA ENTERPRISE SETTINGS

1 User Name:

2 Outer Authentication: EAP-PEAP •

3 Inner Authentication: EAP-MSCHAP

Submit

THIS SECTION IS REQUIRED ONLY IF YOUR NETWORK USES

WPA2-ENTERPRISE ENCRYPTION

WPA2-PSK NETWORKS DO NOT REQUIRE USE OF THESE SETTINGS. IF YOUR WI-FI NETWORK PROMPTS YOU FOR A PASSWORD BUT NO USER NAME WHEN CONNECTING, YOU ARE LIKELY USING A WPA2-PSK NETWORK. CONSULT WITH YOUR ORGANIZATION'S NETWORK ADMINISTRATOR FOR QUESTIONS ABOUT YOUR NETWORK SECURITY SETTINGS.

1. User Name - This field allows the user to enter a username for RADIUS Authentication.

Password - Is entered on the main network page.

2. Outer Authentication - Allows the user to set the outer authentication scheme. The available protocols are EAP-FAST, EAP-TTLS, and EAP-PEAP

3. Inner Authentication - Allows the user to see the inner authentication scheme. The only available protocol is EAP-MSCHAP.

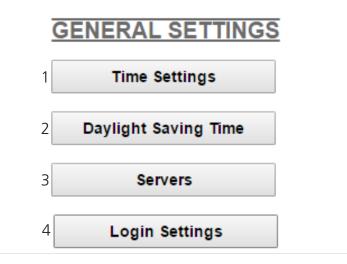

4. Submit - Applies any changes to the previous options when pressed.

WPA2-PSK Networks will ignore all settings entered on this page.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Web Interface - General Settings

- 1. **Time Settings** Takes the user to the Time Settings page.
- 2. Daylight Saving Time Takes the user to the Daylight Saving Time page.
- 3. **Servers** Takes the user to the Servers page.
- 4. Login Settings Takes the user to the Login Settings page.

Web Interface - Time Settings

TIME SETTINGS					
¹ Set Time	02 • : 08 • PM •				
2 Set Date	09/27/2016				
3	Change Time				
4 GMT Offset	-4				
5 Bias Seconds	0				
6	Change Bias/Offset				

1. **Set Time** - This setting allows the user to set the clock to a specific time. Fields for each portion of the time may be accessed via the drop-down menu. New NTP data will override this information.

2. **Set Date** - This setting allows the user to set the clock to a specific date. The date must be entered in the following multi-digit format: mm/dd/yyyy where m is a month digit, d is a day of the month digit, y is a digit of the year. For example, October 7th, 2019 would be entered as 10/07/2019. New NTP data will override this information.

3. Change Time - Applies the information configured in the Set Time and Set Date settings.

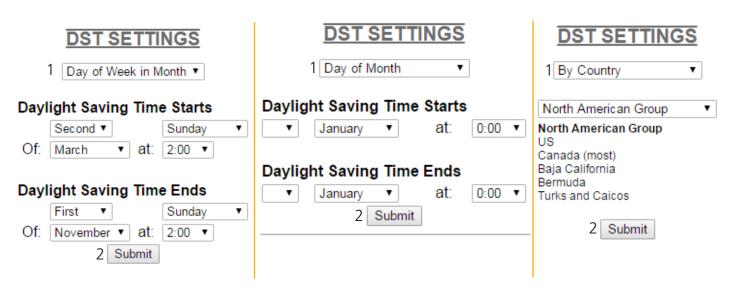

4. **GMT Offset** - This setting allows the user to set which time zone the clock will use when displaying the time. For instance, London is an offset of 0, New York is an offset of -5 and Hong Kong is an offset of +8.

5. **Bias Seconds** - This setting allows the user to alter how much faster or slower the clock will run in relation to synchronized time. The range permits -3600 seconds to +3600 seconds. (This translates to a range of one hour either way, but the time must be entered as a number of seconds). The clock may be configured to function as part of a Zone Clock through this option.

6. Update Bias/Offset - Applies the information configured in the GMT Offset and Bias Seconds settings.

Web Interface - Daylight Saving Time

1. **Method for Defining DST** - There are four methods for defining Daylight Saving Time. The method can be selected from the drop-down menu. Clicking on the Select button displays additional options for that method.

• Day of the Week in the Month - This mode allows the user to select the day of the week, month, and time for when the clock will switch to daylight Saving Time. Once the day, month, and time have been set, click Submit to apply the settings to the clock. Example: Second Sunday of March at 2:00.

• **Day of the Month** - This mode allows the user to select the specific day of the month and time for when the clock will switch to daylight saving time. Once the date, month, and time are set, click Submit to apply the settings to the clock. Example: March 1st at 2:00.

• **By Country** - This mode allows the user to select preset Daylight Saving Time information associated with a specific country or group of countries. Select the preset from the drop-down menu, then click Submit to apply the settings to the clock.

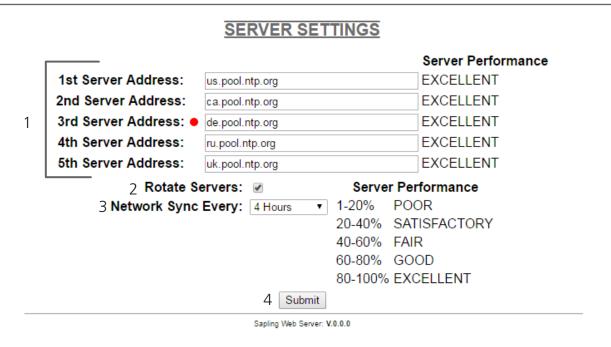

• **None** - This mode does not change the clock for Daylight Saving Time.

2. **Submit** - Applies any changes to the previous options when pressed.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Web Interface - Servers

1. **Server Addresses** - These fields allow a user to set the address that the clock will use to obtain NTP time. Web addresses may be entered as a URL or IP number. The active server is identified by the red dot.

2. **Rotate Servers** - When left unchecked, the clock will only attempt to obtain time from the selected NTP server, and will only attempt to try other servers if the selected server fails. When checked, the clock will rotate through the listed addresses each time the clock performs a synchronization check.

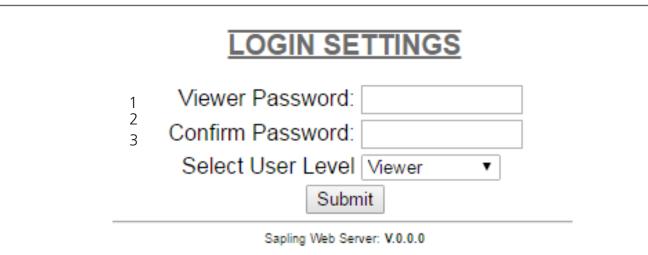

3. **Network Sync Every** - Allows the user to decide how often the clock will power its Wi-Fi transmitter in an attempt to acquire NTP time.

4. Submit - Applies any changes to the previous options when pressed.

If a Server Address entry is left blank, that entry will be skipped. If all entries are set to blank, the clock will function as an unsynchronized quartz clock. It will leave the network adapter powered down unless it has been activated by a movement button-press command.

Web Interface - Login Settings

1. **Viewer/Technician/Administrator Password** - Allows the Administrator to set up a new password to the web interface.

2. **Confirm Password** - The new password must also be entered here for a change to be made.

3. **Select User Level** - Allows the Administrator to select an access level for the new password to be applied to. The user levels have the following permissions:

Viewer - Allows the user to view all of the settings in the clock Web Interface, but does not allow the user to add, remove, or change any setting. The default Viewer password is 1111

Technician - Allows the user to view all of the settings in the clock Web Interface and allows the user to change any setting except for those listed on the Login Settings page. The default Technician password is 6063.

Administrator - Allows the user to view and change any setting in the clock Web Interface, including the passwords on the Login Settings page. The default Administrator password is 8085.

4. **Submit** - Applies any changes to the previous options when pressed.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Web Interface - Diagnostics

DIAGNOSTICS

- 1 Firmware Version: 1.0.3
- 2 Web Page Version: 1.0.2
- 3 Firmware SVN Revision: 2904
- 4 Web Page SVN Revision: 2800
- 5 Run Time From Last Power Up [d-h:m:s]: 1:1:6:36
- 6 Total Run Time [d]: 3
- 7 Reason for last restart: WDT
- 8 Last Received Signal at [m-d-y h:m:s]: 08-24-17 15:08:33
- 9 Network Sync Every [m]: 720
- 10 Worst Server: us.pool.ntp.org
- 11 WiFi Signal Strength [dBm]: -43 (Excellent)
- 12 Battery Level [mV]: 2840
- 13 Hand Errors: No hand errors

Troubleshooting 14

- 1. Firmware Version Lists the clock's firmware version.
- 2. Web Page Version Lists the clock's network card and web interface software version.
- 3. Firmware SVN Revision Lists the SVN number for the Firmware.
- 4. Web Page SVN Revision Lists the SVN number for the Web Page.

5. **Run Time From Last Power Up** - Lists the amount of time that has passed since the clock started receiving power.

6. Total Run Time - Lists the total amount time that the clock has been powered since it was built.

7. Reason for last restart - Lists a code explaining the reason that the clock was restarted.

WDT - Watchdog Timer - Clock detected a software error and automatically restarted itself.

PowerUp - Power Cycle - The clock power source was reactivated after being removed by either the user or a power outage.

8. Last Received Signal at - Lists the time and date when the clock last received NTP data.

9. **Network Sync Every** - Lists the number of minutes that pass between each time that the clock powers its transmitter to get NTP data.

10. **Worst Server** - Lists the number of the NTP server that has responded the least often when contacted for NTP data. See "Web Interface - Servers" to see the server address/domain associated with each number.

11. **Wi-Fi Signal Strength** - Lists the signal strength between the clock and wireless access point or wireless router in dBm. The closer the number is to 0, the stronger the signal is.

12. **Battery Level** - Lists the remaining battery power in millivolts (mV).

13. **Hand Errors** - Lists the number of times that the internal diagnostics have reported an error resulting from an improper motion of the clock hands.

14. **Troubleshooting** - Takes the user to the Troubleshooting page. On this page, the user can have the clock check the hands for errors, set the hands to 12:00, or restore the clock to the factory default settings.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Web Interface - Troubleshooting

1. **Check Hands** - When clicked, this button causes the clock to test the position and accuracy of the hands as they travel around the clock. If an error is detected, the clock will stop and the Red LED on the back of the clock will start to blink. Refer to the table below for the meaning of each blink:

NUMBER OF FLASHES	ERROR MESSAGE
1,2	Error detected in second hand. Confirm that hands are not hitting each other, then repeat the test.
3,4,5	Error detected in the minute or hour hand. Confirm that hands are not hitting each other, then repeat the test.
6,7,8	Call tech support. (+1) 215.322.6063

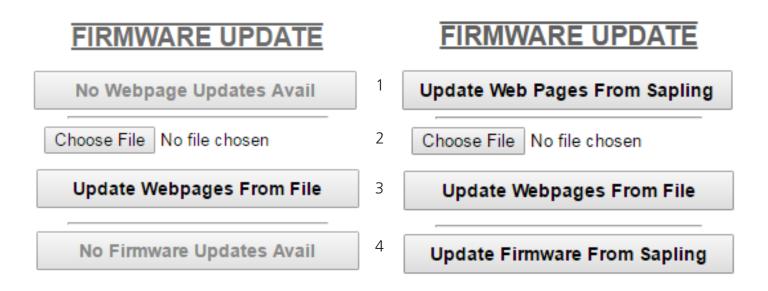

The clock will return to showing the time after ten minutes.

2. **Set to 12:00** - When clicked, this button causes the clock to set the hour, minute, and second hands to the 12 o'clock position. The clock will return to showing the time after four hours.

3. **Restore Default settings** - When clicked, this button causes the clock to revert to the factory default settings. All data entered by the user will be lost, including network and security parameters. Once the clock has rebooted, it will go into Direct Mode, and will no longer be accessible over the network until new network settings have been entered.

Web Interface - Software Updates

1. **Update Web Pages From Sapling -** Updates software on the network card and web interface by downloading the latest version from Sapling's servers.

2. **Choose File -** Allows the user to select a new copy of the network card and web interface software to be uploaded to the Wi-Fi clock. This does not upload the file, it only selects the file.

3. **Update Webpages From File -** Takes whichever file was selected with the Choose File button and applies the update file to the clock.

4. **Update Firmware From Sapling -** Updates software on the clock by downloading the latest version from Sapling's servers.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Frequently Asked Questions

VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

The Clock and all network equipment must be powered and configured before you install the clock. If the network equipment is not properly installed and powered, and if the clocks have not been configured to communicate with the network equipment, the clocks will not synchronize.

What battery size do I use for the battery-powered clocks?

Wi-Fi battery-operated clocks use two "D" cell batteries. Duracell Procell D Alkaline Batteries have been found to produce the best results.

What size utility/gang box is needed?

A standard single gang box is required for wall mounting a clock. However, if you are installing a locallypowered double mount or flag mount clock, then a standard double gang box is required.

Will the Wi-Fi clock cause interference with other wireless devices?

No. The Wi-Fi clock operates a low-power transmitter on the 2.4GHz spectrum, and does not broadcast often enough or powerfully enough to cause interference.

What advantages are there to having a locally-powered wireless clock instead of a batteryoperated one?

Locally-powered Wi-Fi clocks receive NTP time every five minutes. Battery-powered clocks receive and transmit signals once every two hours at most. Less time between synchronization signals means a greater guarantee of timekeeping accuracy.

Additionally, the web interface on a locally-powered Wi-Fi clock is always accessible. The web interface of a battery-powered clock is accessible only after a user manually presses the Web interface switch on the clock movement.

Is the clock compatible with other Wireless Clock systems?

No. A Wi-Fi clock obtains data directly from an NTP server through a computer network. It does not and cannot communicate with other wireless secondary clocks.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Frequently Asked Questions (ctd.)

How long does it take for a clock to receive correction data?

On initial power up, the clock will open its receiver for one minute until the signal is acquired. If everything is installed and configured correctly, the clock should get NTP data and begin correcting itself within five seconds.

If the user wants to manually cause the clock to do this, press and release the WIFI SW button once. Please refer the section "Diagnostic Test 1 - Signal Information" for a diagram displaying the location of the button. Once the clock has been configured, time correction is based on the clock's power source and settings.

- If the clock is locally-powered, it will attempt to acquire NTP data once every five minutes. This interval can be altered by a user with Technician or Administrator access to the clock.
- If the clock is battery-powered, it will attempt to acquire NTP data once every twelve hours. This interval can be altered by a user with Technician or Administrator access to the clock.

If the clock and network are properly configured, the clock should receive NTP data within five seconds, and will correct itself if a correction is needed.

When I power my clock, it seems to be running a test instead of showing the time. What is it doing?

Immediately after power up a clock will check the position of its hands against sensors in the movement. This is a short test, and the clock will automatically reposition the hands to show accurate time after the test is completed.

Can I manually set the time on the clock?

No. Furthermore, attempting to open the front crystal or moving the hands manually will damage the clock and void the warranty.

Instead, please use the GMT Offset and Bias Seconds options in the Web Interface. Refer to the section "Web Interface - Time Settings" for more information.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Troubleshooting

VERY IMPORTANT:

CONFIGURE YOUR CLOCK BEFORE MOUNTING IT TO A WALL OR HOUSING. REFER TO THE SYNCHRONIZATION SYSTEM SETUP SECTION OF THIS MANUAL FOR INSTRUCTIONS.

The Clock and all network equipment must be powered and configured before you install the clock. If the network equipment is not properly installed and powered, and if the clocks have not been configured to communicate with the network equipment, the clocks will not synchronize.

The clock is attached to the power source, but it is not running. What should I do?

a. Make sure that the movement's gearbox pin is removed.

b. If a battery-powered model, check to be sure that the battery has been properly inserted into the battery pack and that the battery has the proper voltage.

c. If a locally-powered model, check to make sure that the wiring in the connector complies with the installation instructions. This information is usually included in step #2.

d. Make sure that the transformer is an isolated transformer if using a 24 volt model.

e. Measure the voltage between the power (black) wire and the neutral (white) wire. The voltage between the white and black wires should measure 105-126 volts AC in the 115 volt model, 207-253 volts AC in the 230 volt model, or 21.5-26.5 volts AC/DC in the 24 volt model.

Failure to follow instructions c and d can result in a blown fuse.

The clock is not showing the right time. What should I do?

Enter the web interface and confirm that the GMT Offset, Bias Seconds section, DST Selection have been properly set in accordance with your nation and time zone.

If you have an in-house NTP server, confirm that the NTP server has been set as a time source, and that the server is distributing the correct time.

You may also perform Diagnostic #1 to check the last time that a signal was received, or Diagnostic #3 to perform a mechanical test.

How can it be determined if the clock is receiving a good signal?

Perform Diagnostic #2.

The clock is in a location with a poor signal or no signal at all. What should I do?

You have two options:

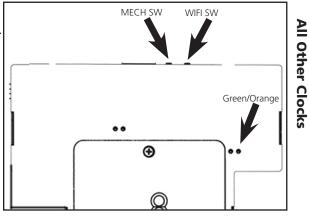

- 1. Boost the transmitter power output of the closest Wireless Router or Wireless Access Point.
- 2. Install a Wireless Access Point closer to the clock.

Troubleshooting

I am uncertain if my clock is accessing my wireless network. How to I check this?

Press and release the WIFI SW button once and observe the Red and Green LEDs on the right side of the clock movement. If the clock is able to connect to the network, the Green LED will blink green, briefly turn Orange, then turn steady green while the connection is available. On a battery powered clock, it will remain on for four minutes or until the WIFI SW button is pressed and released three times.

If the clock is not able to connect to the network, the Green LED will blink a few times, and will NOT change to Orange. Instead, the light will completely turn off. This could mean that the wrong network name or password was entered in

the web interface, and needs to be changed. This could also be a sign of a network failure. Be sure to check both the clock settings and your network appliances to confirm that they are properly configured and in working order.

I have mounted my Aluminum/Wood clock on the wall, but forgot to attach the release lever. How do I get it off the wall?

Take a thin flathead screwdriver, thin ruler, or eyeglass screwdriver and insert the end between the clock and the wall. Press down on the latch until you are able to slide the clock off the mounting piece.

The clock is not receiving data from the NTP server, despite the fact that other nearby clocks are receiving data and properly adjusting. What should I do?

First, check the battery voltage if the clock is battery powered. Low battery voltage may prevent the clock from operating correctly.

Next, enter the clock's Web Interface and confirm that the network and server settings are configured correctly. Ask your network administrator to help you confirm the settings.

If the clock still does not correct, call technical support at (+1) 215.322.6063.

The clock is keeping old settings after I rebooted it. Did I miss something?

After entering and submitting new settings for the clock that demand a reboot, disconnect the clock from its power source and wait for ten seconds. After ten seconds have passed, power the clock. Always wait ten seconds when rebooting the clock.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

Troubleshooting

Why isn't the Wi-Fi clock showing up on my Network Monitor?

Perform these steps in order until a step causes the clock to appear on the Network Monitor:

1. Confirm that the clock can connect to the network and is within signal range by pressing WIFI SW once and observing the orange and green LEDs on the right side of the clock movement. If the clock is able to connect to the network, the Green LED will blink green, briefly turn orange, then turn steady green while the connection is available.

2. Confirm that the clock is currently transmitting to the network. **If the clock does not have its wireless transmitter active, it will not appear on the Network Monitor.** Remember: battery powered clocks are not continuously transmitting, and may require the user to press and release the WIFI SW button once to activate it. Keep in mind that the transmitter will deactivate after four minutes if not accessed.

3. If the clock is a battery powered clock, confirm that the batteries are not low. Press the WIFI SW button once. If the batteries are too low for a connection, a red LED will flash three times.

4. Confirm that the viewing filters on the Monitor software are set to display Wi-Fi Clocks.

5. Confirm that you have the latest version of the Network Monitor software, as older versions are not able to detect Wi-Fi clocks. Your version should be 1.3.1 or newer.

6.Log on to the Clock and, on the Network Settings page, set Broadcast to Monitors to OFF, set Send Specific Monitor IP to ON, enter your computer's IP address into the Monitor Address field, then press Submit followed by Log Out. Wait about two minutes for a result.

7. Confirm that the computer or network firewall is not blocking ports 80, 123, or 1777. On Windows machines, the user may receive a prompt the first time that the Network Monitor is used inquiring about network access. Ensure that the monitor software has unrestricted access.

8. Confirm that the computer running the Network Monitor software is on the same subnet as the Wi-Fi clocks. If the clock and computer are on different subnets, one will not see the other. For instance, assuming that a computer has IP address 192.168.1.3, a clock has IP address 192.168.0.4, and both devices have subnet masks of 255.255.255.0, then a Network Monitor on the computer will not be able to see the clock.

9. If the clock has a recorded Static IP, log into the clock's Web Interface and confirm under Network Settings that the clock is broadcasting to all monitors on the network.

10. If all else fails, reconfigure the clock by following the instructions written in the section of this manual named "Synchronization System Setup." Once finished, repeat steps 1 and 2.

11. Confirm that the Wireless Access point is broadcasting using 802.11b, g, or n protocol, and that the SSID does not contain any symbols. The SSID may only consist of letters, numbers, and spaces.

12. Check with your System Administrator to confirm that your security policies permit the clock to be on your network. This includes confirmation of your encryption settings if your clock uses WPA2-Enterprise security protocols.

13. If the clock is still not communicating with the Network Monitor, contact tech support.

P. (+1) 215.322.6063 F. (+1) 215.322.8498 www.sapling-inc.com

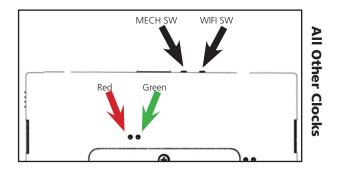

Diagnostic Test #1 - Signal Information

The purpose of Diagnostic #1 is to determine how long it has been since the clock last received a synchronization signal.

Diagnostic #1 may be enabled by pressing the MECH SW button once. If the clock is performing this diagnostic, then a green LED on the movement will flash once every three seconds. It will continue to flash once every three seconds until the diagnostic is complete.

While in diagnostic mode, the hour and minute hands will continue to run normally. After two minutes, the Diagnostic will end and the clock will continue normal operation.

During the diagnostic, the second hand will display how long it has been since the clock received a synchronization signal.

Second Hand Position	Time Since Clock Last Received Data
12	Within the last hour
1	Between 1 and 2 hours ago
2	Between 2 and 3 hours ago
3	Between 3 and 4 hours ago
4	Between 4 and 5 hours ago
5	Between 5 and 6 hours ago
6	Between 6 and 7 hours ago
7	Between 7 and 8 hours ago
8	Between 8 and 9 hours ago
9	Between 9 and 10 hours ago
10	Between 10 and 11 hours ago
11	Over 11 hours may also signify that the clock is set to manufacturing default.

The second hand will remain on this number for two minutes, and then the clock will revert to displaying the accurate time.

Diagnostic Test #2 - Signal Quality

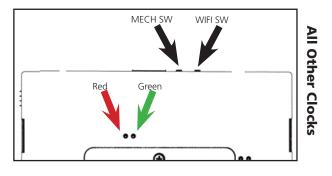

The purpose of Diagnostic #2 is to determine the quality of the Wi-Fi signal.

Diagnostic #2 may be enabled by pressing the diagnostic button twice. If the clock is performing this diagnostic, then a green LED on the movement will flash twice every three seconds. It will continue to flash twice every three seconds until the diagnostic is complete.

During the diagnostic, the second hand will display the signal quality by pointing to a number from 1 to 10. On this scale, 1 indicates the best signal quality while 10 indicates poor signal quality.

While the second hand is indicating the signal quality, the hour and minute hands will continue to display the time. After two minutes, the Diagnostic will end and the second hand will return to displaying the time.

Diagnostic Test #3 - Full Mechanical Test

The purpose of Diagnostic #3 is to bring the clock back to 12:00:00.

Diagnostic #3 may be enabled by pressing the MECH SW button three times. If the clock is performing this diagnostic, then a green LED on the back will flash three times with a one second break between each flash. The LED will continue to flash green until the diagnostic is complete. The clock will confirm that the diagnostic is complete when the LED shines a different color.

If the LED is flashing red:

If the LED is a solid green, the test was completed successfully.

NUMBER OF FLASHES	ERROR MESSAGE
1,2	Error detected in second hand. Confirm that hands are not hitting each other, then repeat the test.
3,4,5	Error detected in the minute or hour hand. Confirm that hands are not hitting each other, then repeat the test.
6,7,8	Call tech support. (+1) 215.322.6063

At the end of Diagnostic three, the clock hands will be set to 12:00:00. The clock will resume normal operation after four hours have passed.

Diagnostic Test #3 - Full Mechanical Test (ctd.)

While performing Diagnostic #3, an observer may see the clock do the following actions:

- 1. The clock moves the second hand to 00
- The clock moves the second hand around to 00 again, to verify that the hand arrived after 60 pulses.
- 3. The clock moves the minute and hour hands to the next known position.
- 4. The clock moves the minute and hour hands around to the same position, to verify that the hands arrived after 720 pulses.
- 5. The clock moves the minute and hour hands to 12, so that the clock reads 12:00:00.
- 6. The clock tests frequency.

Diagnostic Test #4 - Battery Voltage

The purpose of Diagnostic #4 is to check the voltage level of the batteries on a battery-powered clock.

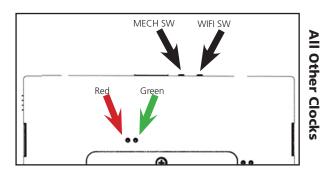

Diagnostic #4 may be enabled by pressing the MECH SW button four times. If the clock is performing this diagnostic, then a green LED on the back will flash twice every three seconds. The output of the test is displayed by the second hand.

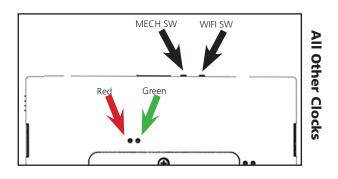

Some examples.

Second hand is on 2, the battery level is 2.2V Second hand is on 5, the battery level is 2.5V Second hand is on 9, the battery level is 2.9V Second hand is on 10, the battery level is 3.0V Second hand is on 11, the battery level is more than 3.0V

Restore Clock to Manufacturing Default

Pressing and holding the MECH SW and WIFI SW buttons simultaneously for ten seconds and then releasing them will reset the clock to its manufacturing default settings. You will know that the command was successful if the green LED turns on. All data entered by the user will be lost, including network and security parameters.

Warranty

Sapling Limited Warranty and Disclaimer

The Sapling Company, Inc. warrants only that at the time of delivery and for a period of 24 calendar months after delivery or the period stated in this invoice, if different, the Goods shall be free of defects in workmanship and materials, PROVIDED that this warranty shall not apply:

To damage caused by Buyer's or any third party's act, default or misuse of the Goods or by failure to follow any instructions supplied with the Goods.

Where the Goods have been used in connection with or incorporated into equipment or materials the specification of which has not been approved in writing by The Sapling Company, Inc.;

To Goods which are altered, modified or repaired in any place other than a Sapling Company, Inc. factory or by persons not expressly authorized or approved in writing by The Sapling Company, Inc.

THE FOREGOING WARRANTY IS EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES WITH RESPECT TO GOODS DELIVERED UNDER THIS CONTRACT, WHETHER EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. The foregoing warranty runs only to Buyer. There are no oral or written promises, representations or warranties collateral to or affecting this contract. Representatives of The Sapling Company, Inc. may have made oral statements about products described in this contract. Such statements do not constitute warranties, shall not be relied on by Buyer and are not part of the contract.

Note: An extended 5 year (60 month) warranty is also available at the time of the system purchase with a surcharge.

FCC Statements

The Federal Communications Commission (FCC) wants you to know:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protraction against harmful interference in a commercial installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician.

FCC Warnings:

Changes or modifications not expressly approved by the manufacturer could void the user authority to operate the equipment under FCC Rules.

The antenna(s) used for this transmitter must be installed to provide a separation distance of at least 5.78 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

FCC ID Number: YOPGS2011MIZ
