

Upgrading Your Old Clock System

We have great news for you!

The Scenario:

The clock part number you have provided indicates the use of very old technology that only synchronizes once every 12 hours. This means that in the event of a power outage or when adding or replacing clocks, it could take up to 12 hours for the clocks to display the correct time due to the outdated technology.

The Solution:

Instead of spending money on new clocks with old technology, there is a modern solution available. Sapling Wireless Clocks utilize state-of-the-art technology to synchronize every minute when hardwired to power. This means that when you install a new clock, it will synchronize within seconds, eliminating any downtime for displaying the correct time after power outages or replacements.

Implementation:

The best part? You don't have to replace all your clocks at once! You can gradually upgrade your clock system. If you already have a Sapling Master Clock, all you need is a wireless repeater. If you are using an old non-Sapling Master Clock, you can purchase a new Sapling Master Clock with a transmitter.

This setup allows the master clock to continue supporting your old sync-wired clocks while transmitting time data for newer wireless clocks. As old clocks fail, simply replace them with new Sapling Wireless Clocks.

Advantages:

-  **Efficiency and Productivity:** Enjoy superior once-per-minute synchronization, ensuring smooth operation after power outages and seamless integration of replacement clocks.
-  **Cost-Effective Solution:** Upgrade gradually by replacing older clocks as they fail, allowing you to work within your budget.

Upgrading your old clock system V1.0

-  Utilize Existing Infrastructure: The wireless clocks are offered in 24-volt or 110-volt powering options, making use of your current power and wiring infrastructure.
-  Flexibility: Analog wireless clocks also come in a battery-powered option, allowing you to expand the system to areas without existing power.
-  Design and Styles: Sapling Wireless Clocks are offered in digital or analog format in different sizes and shapes. Analog round clocks can be offered with our standard black case, premium brushed aluminum or wooden cases. You can also select different dial styles, customize with your logo or mascot or even specialty hands options.

Upgrade Your Clock System Today! Boost your older clock system with new reliable technology, available in a variety of design options. Contact us to learn more about upgrading your clock system.
